Groebner, O. Hartogensis, A.C. van Kroonenberg, S. Martin, G. J. Steeneveld, Y. Seity, C. Yagüe, H. Jonker, W. Angevine, D. Lenschow, Z. Sorbjan

OUTLINE

- Issue & objectives
- The 2011 Field experiment
- Preliminary results
- Instrumental aspects

Issue

Stull, 1988 - concept

A few numerical studies, scarce observations...

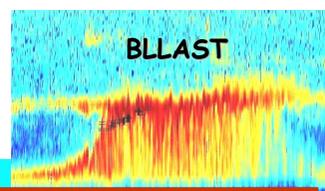

Late afternoon transition:

- Progressive shut down of the surface heating
- Stabilization of the temperature profile close to the surface
- Transition from thermal turbulence to dynamical turbulence

Challenges:

- PBL decaying still not well understood and represented
- Transitional aspects
- Competition of several weak forcings
- Close to (or beyond) the edge for scaling laws and boundary layer definition

Scientific Questions

Definitions & characterizations

*Of the various layers
(surface layer, mixed-layer, residual layer,...)*

Understanding

- *of the evolution of turbulence intensity & scales*
- *of the role of the various PBL processes (entrainment, dynamical turbulence, convection, advection...)*
- *of the role of surface heterogeneity*

Impact

- *Transport of trace gases and water vapour*
- *Representation of the diurnal cycle by meteorological models*
- *Evaluation of the forecast models*

Method:

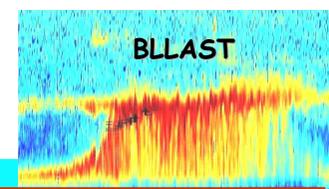

Observations & Numerical simulations

(1D mixed-layer model, LES, Mesoscale, NWP)

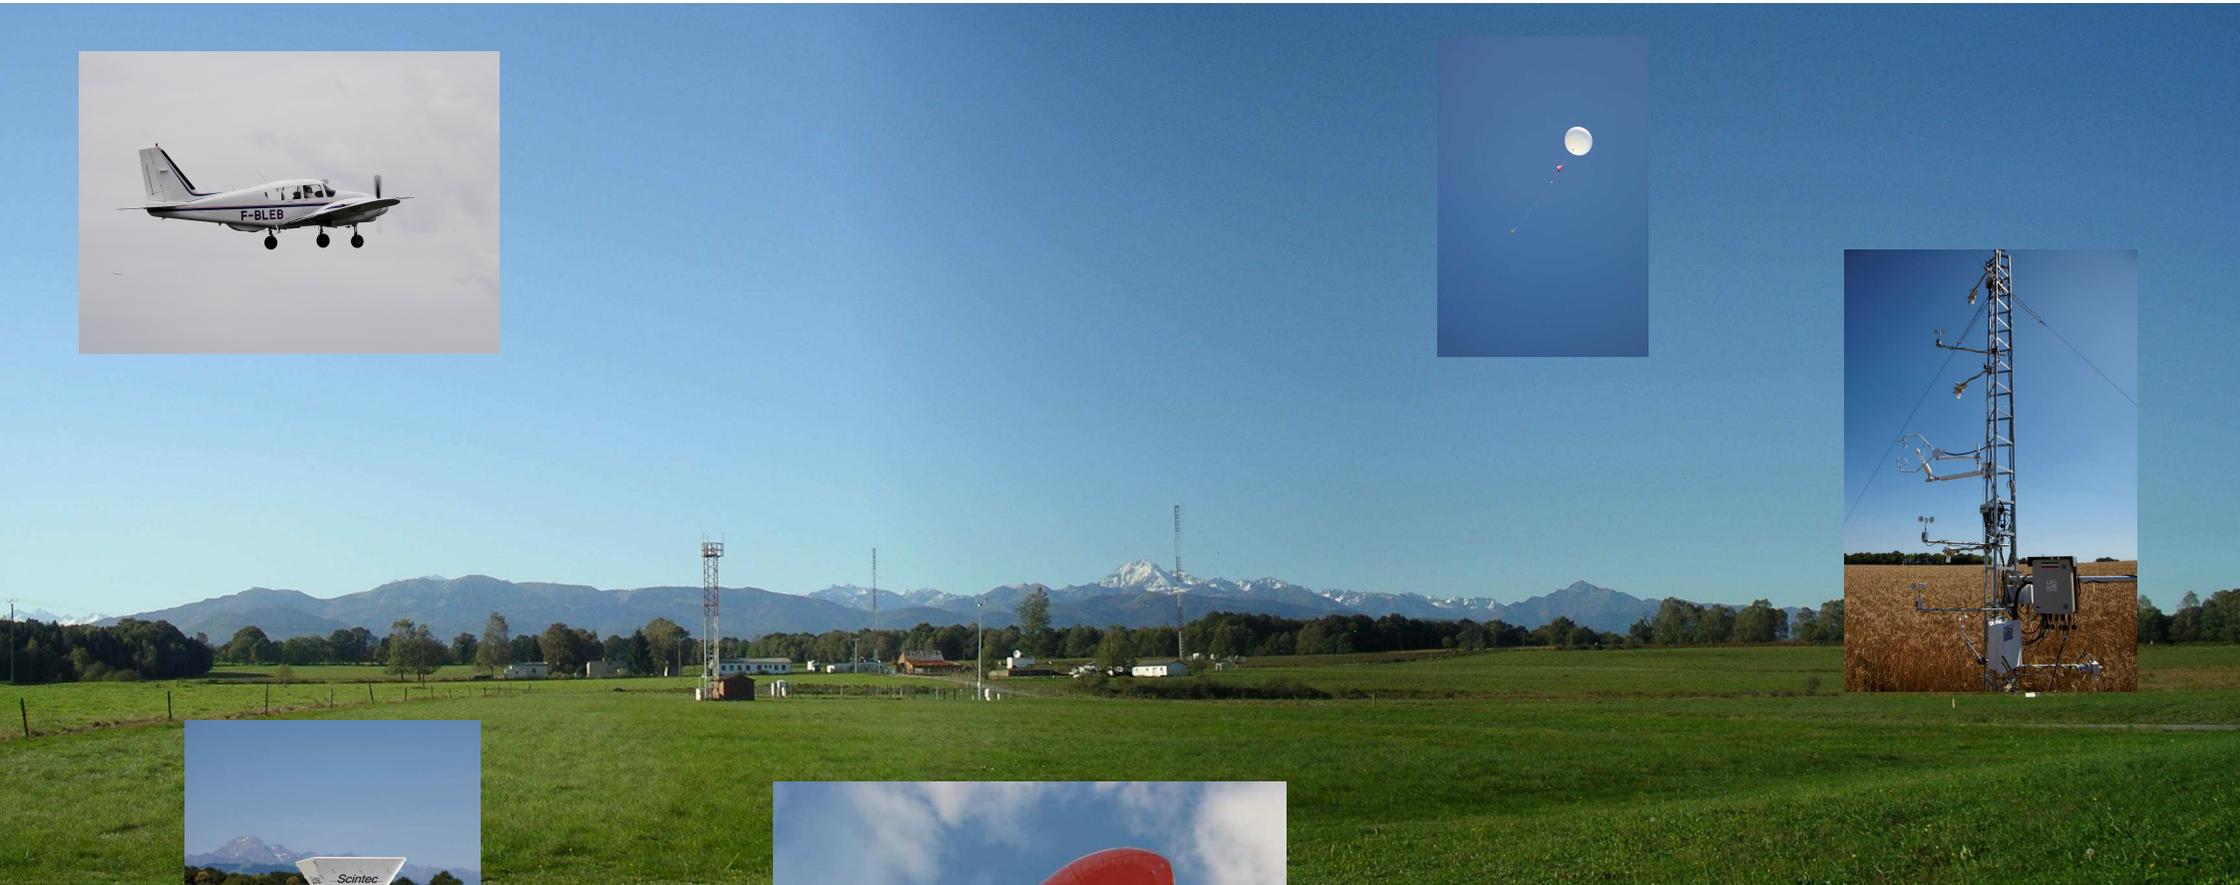

The field experiment

Field experiment

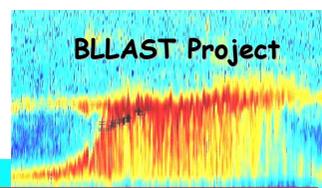

14 June - 8 July 2011

➔ Instrumented site of Laboratoire d'Aérodologie, Lannemezan

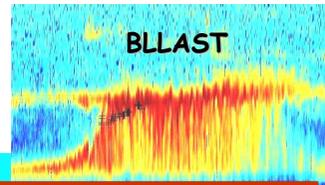

Instrumented towers
Tethered and radiosounding balloons
Aircraft and UAS
Remote sensing: UHF, sodar, lidar
Scintillometers

Instrumented site of Laboratoire d'Aérodynamique, Lannemezan, France

Exploration needs

- **PBL Vertical structure**

multi-layering, shear, entrainment, stability

- **Surface layer spatial heterogeneity**

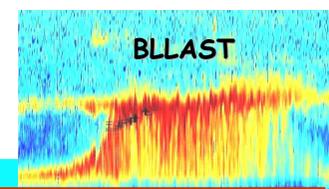

Surface cover heterogeneity, soil moisture, heat storage, energy balance phase shift

- **Radiation divergence**

- **Advection, large scale subsidence, baroclinicity**

- **Gravity waves**

Manned and unmanned airplanes

Avions et Drones

Summary table of the IOPs

		AIRCRAFT		SUMO UAS			RADIO SOUNDINGS		
		Sky Arrow	Piper Aztec	PROF	SURV	TURB	Site 1	Site 2	Site 3
IOP 00	14/06/11	2 FL 2h			1	2	8	1	
IOP 01	15/06/11	2 FL 4h	2FL 3,0h		2	19	7	6	
IOP 02	19/06/11	2 FL 4h	2FL 3,9h	12	13	3	4	8	
IOP 03	20/06/11	3 FL 5h	2FL 4,2h	11	10	2	4	7	
IOP 04	24/06/11	2 FL 4h		10	2		4		
IOP 05	25/06/11	3 FL 4h	3FL 5,2h	11	6	2	4	8	
IOP 06	26/06/11	2 FL 4h	2FL 4,1h	11	8	4	6	6	1
IOP 07	27/06/11		2 FL 2,0h	12	12	11	6	2	2
IOP 08	30/06/11		2 FL 4,5h	12	5		3		
IOP 09	01/07/11		2 FL 4,5h	6	5		7	8	
IOP 10	02/07/11		2 FL 3,6h	9	3		6	8	
IOP 11	05/07/11		3 FL 5,9h	13	1		8	8	3
TOTAL		27	41	107	68	43	67	62	6
TOTAL		68 h		218 FL			135 RS		

Tethered balloon in site 1 (turbulence probe):

~80 hours total

Tethered balloons in site 2 :

~50 hours total for each

M2AV UAS:

9 test flights

15 science flights in second period

IOP 0-1 : Post-front conditions – north-westerly flow

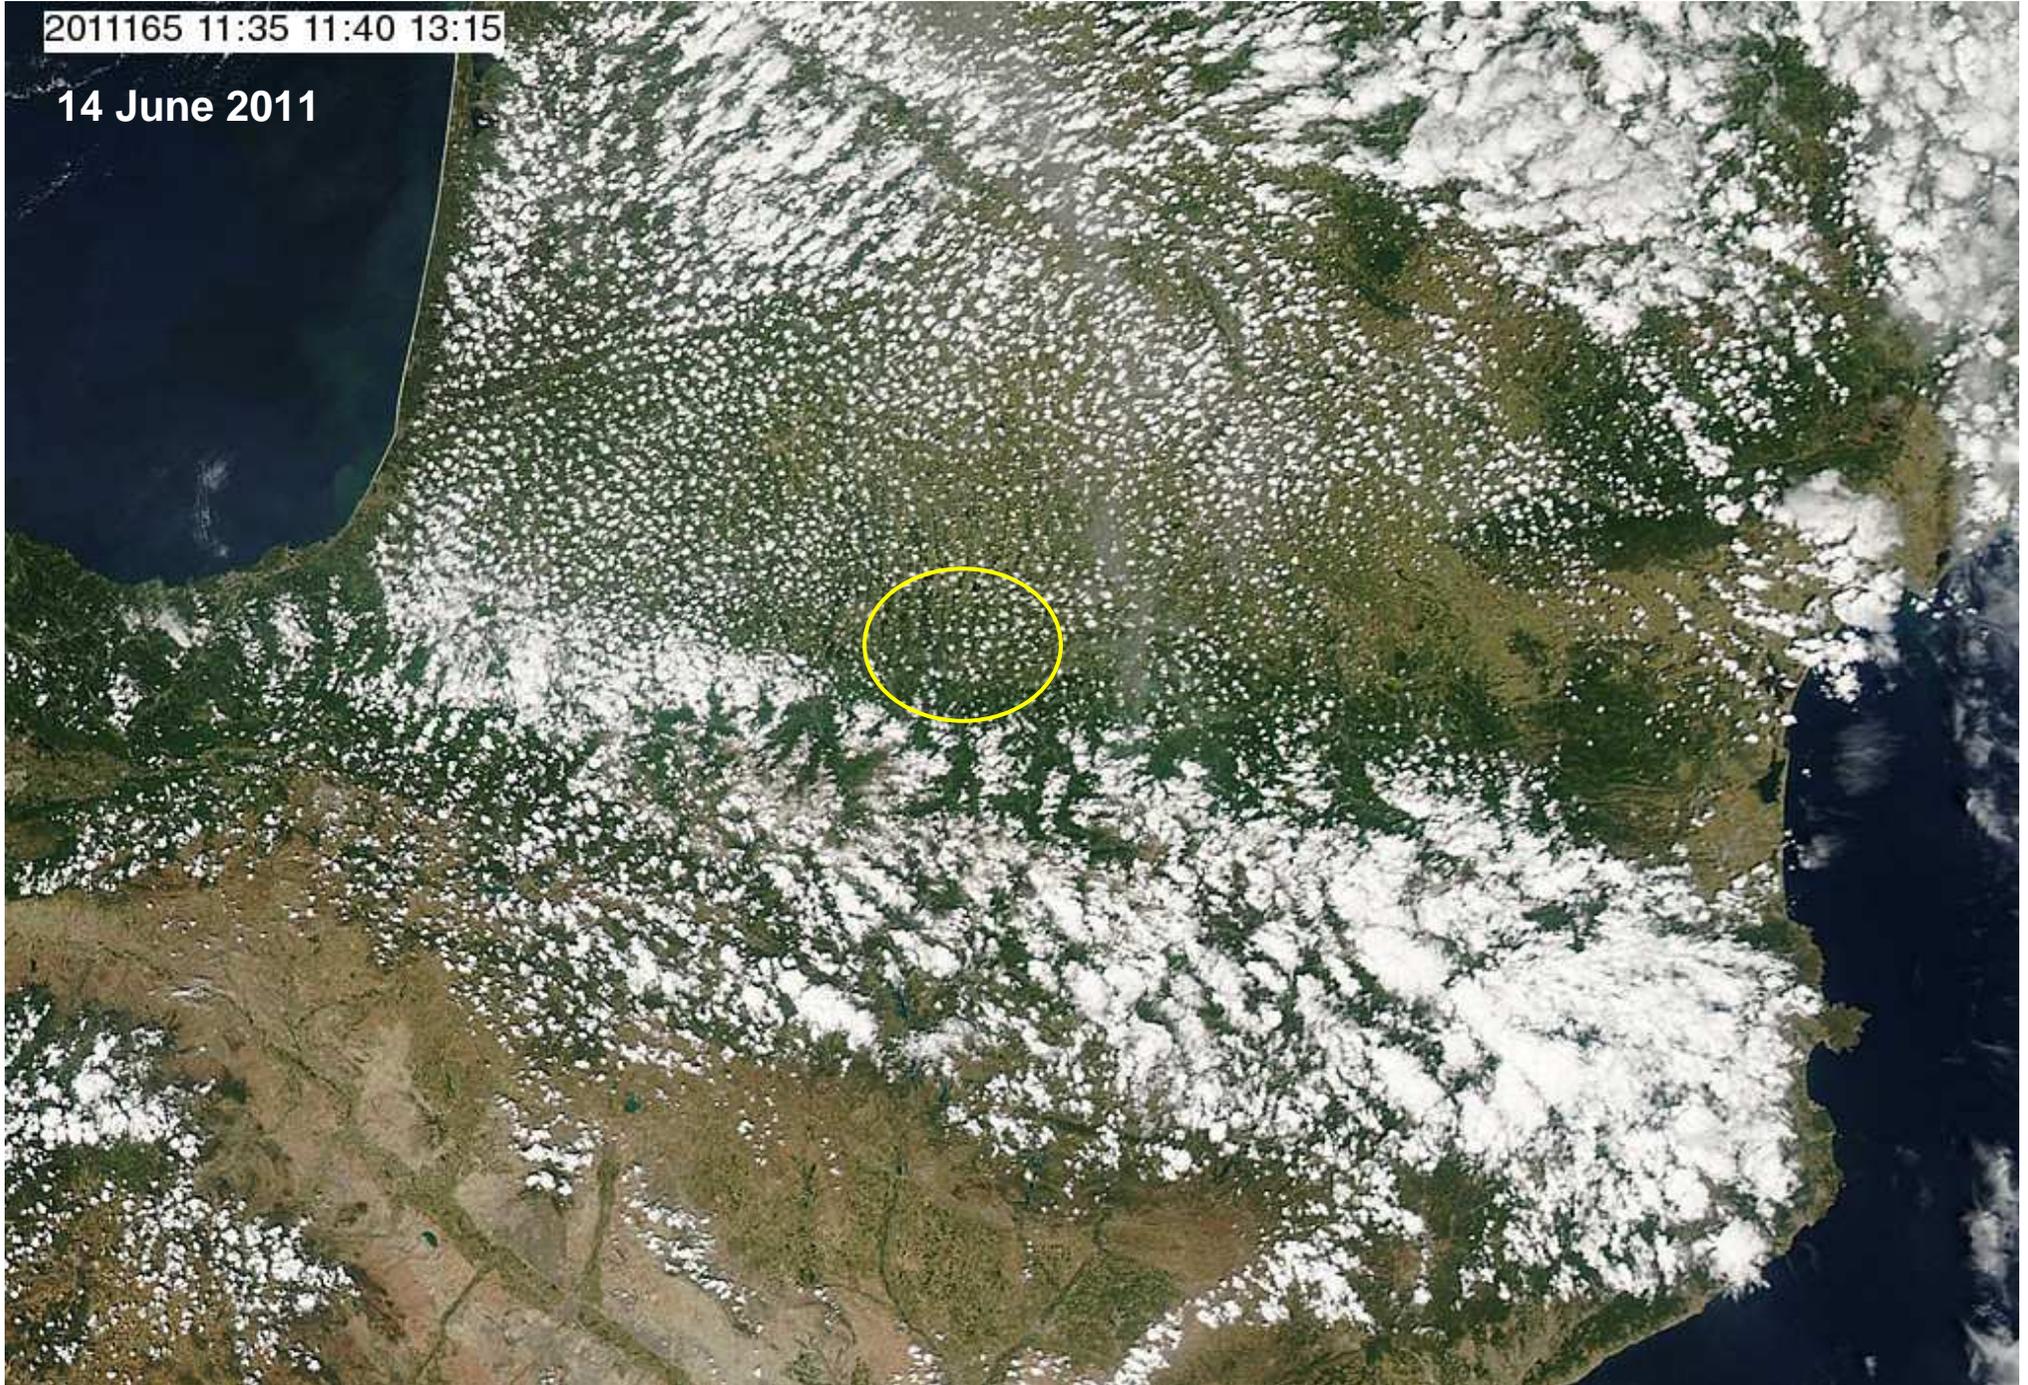

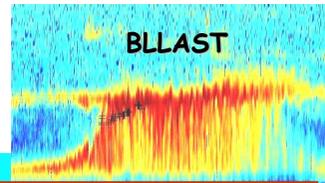

IOP 2-3 : No significant synoptic surface pressure gradient – heat wave

IOP 4-7 : Drying surface episode with easterly flow over the area

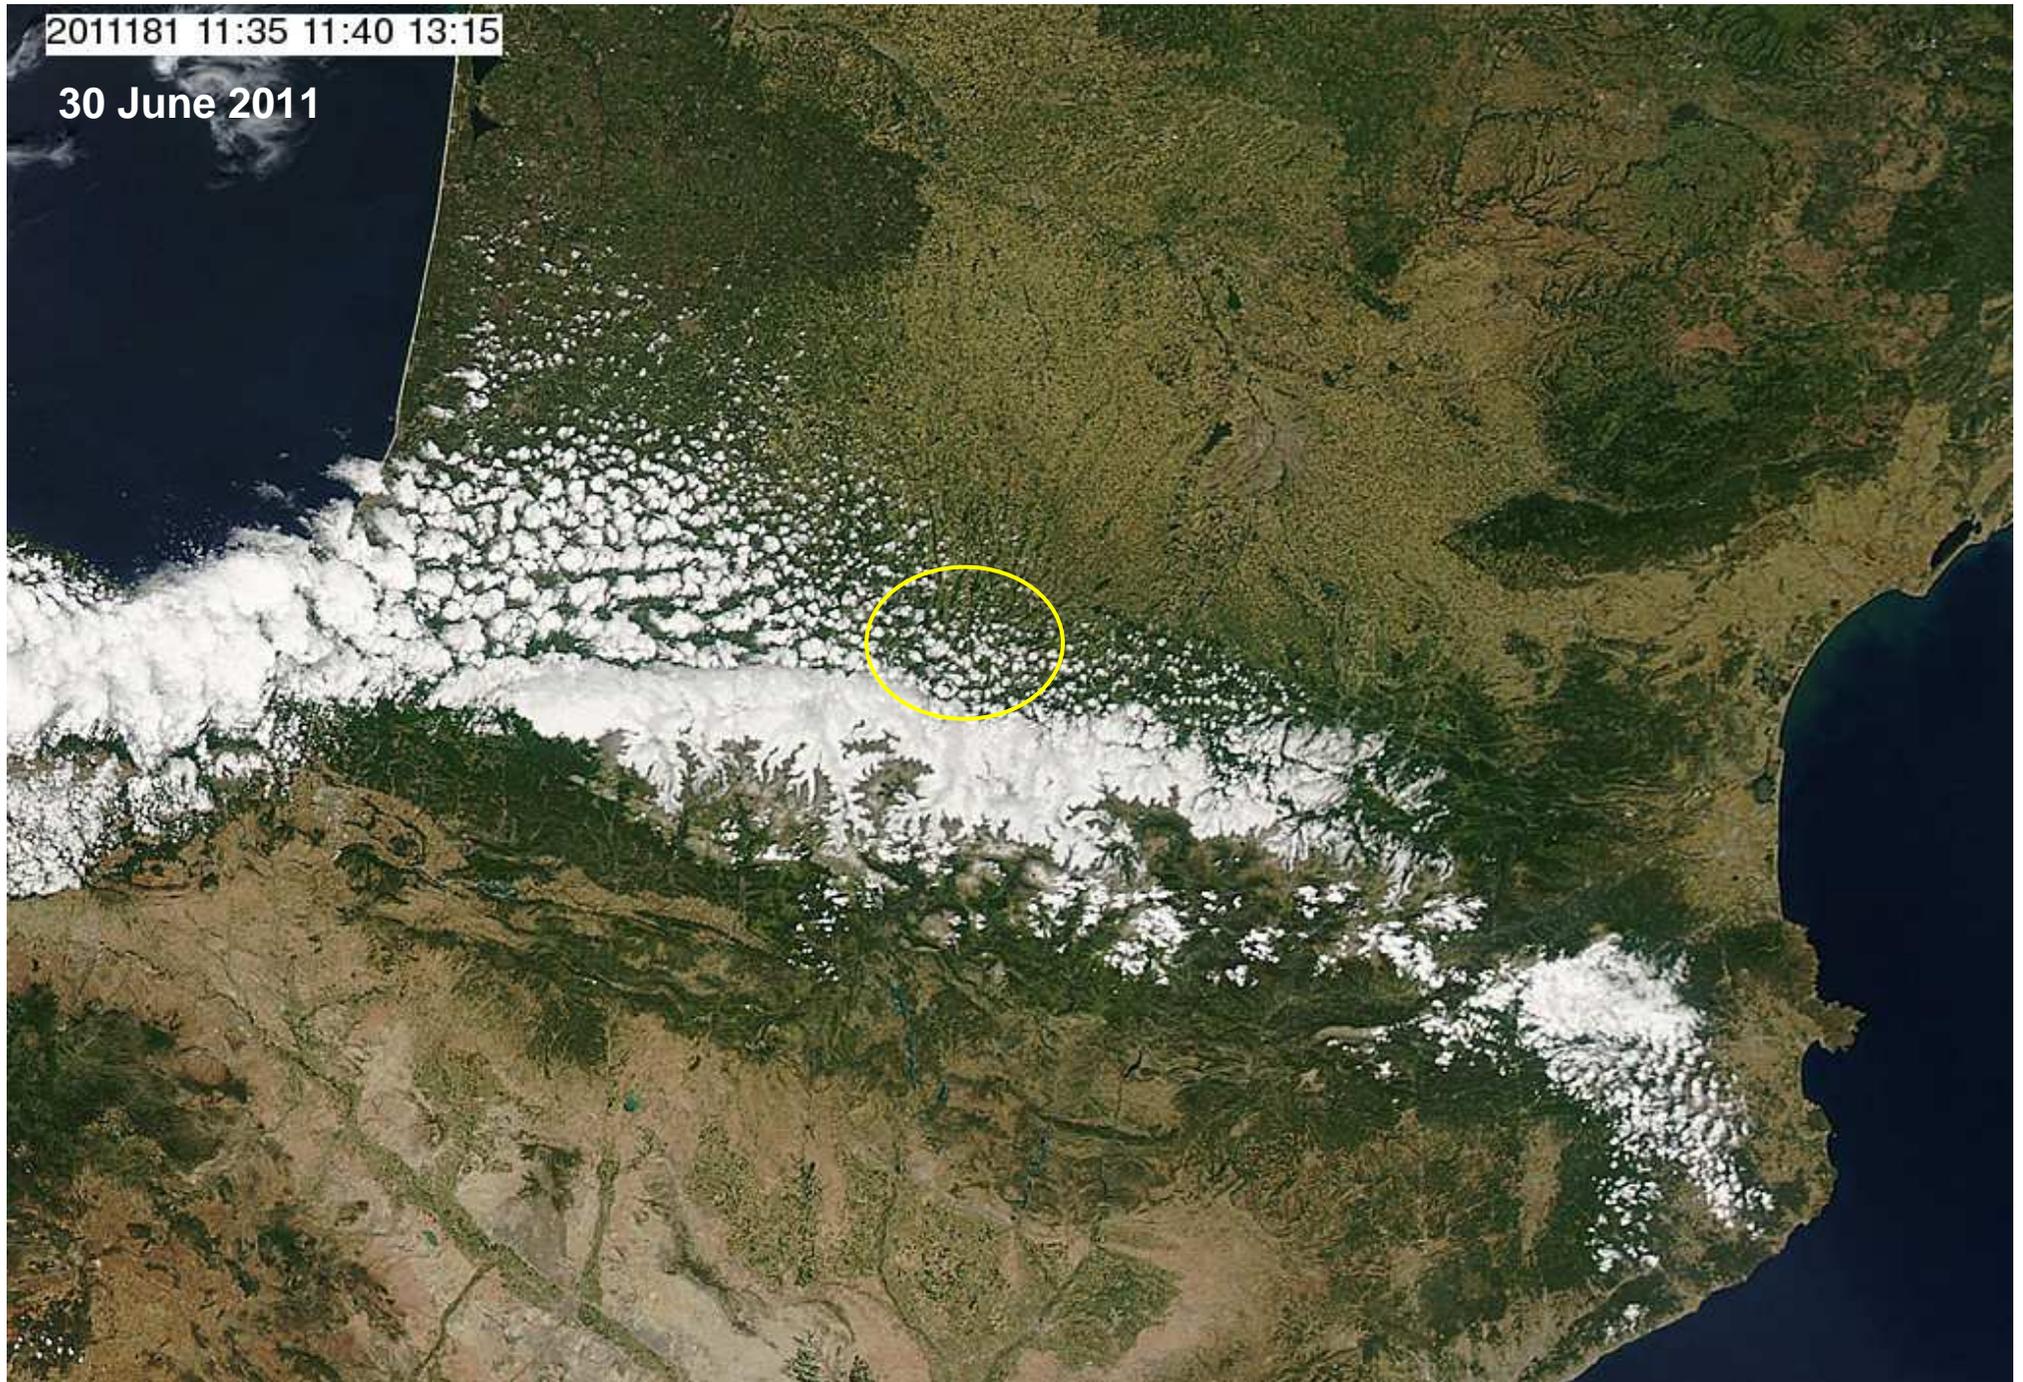

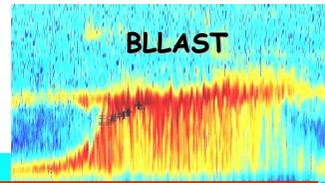

IOP 8-10 : Drying surface episode with synoptic NE at low level

IOP 11 : Weak north synoptic wind – plain-mountain breeze regime

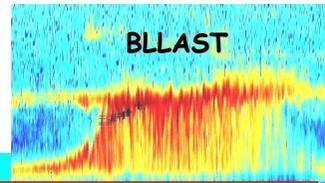

Meteorological conditions

Meteorological conditions

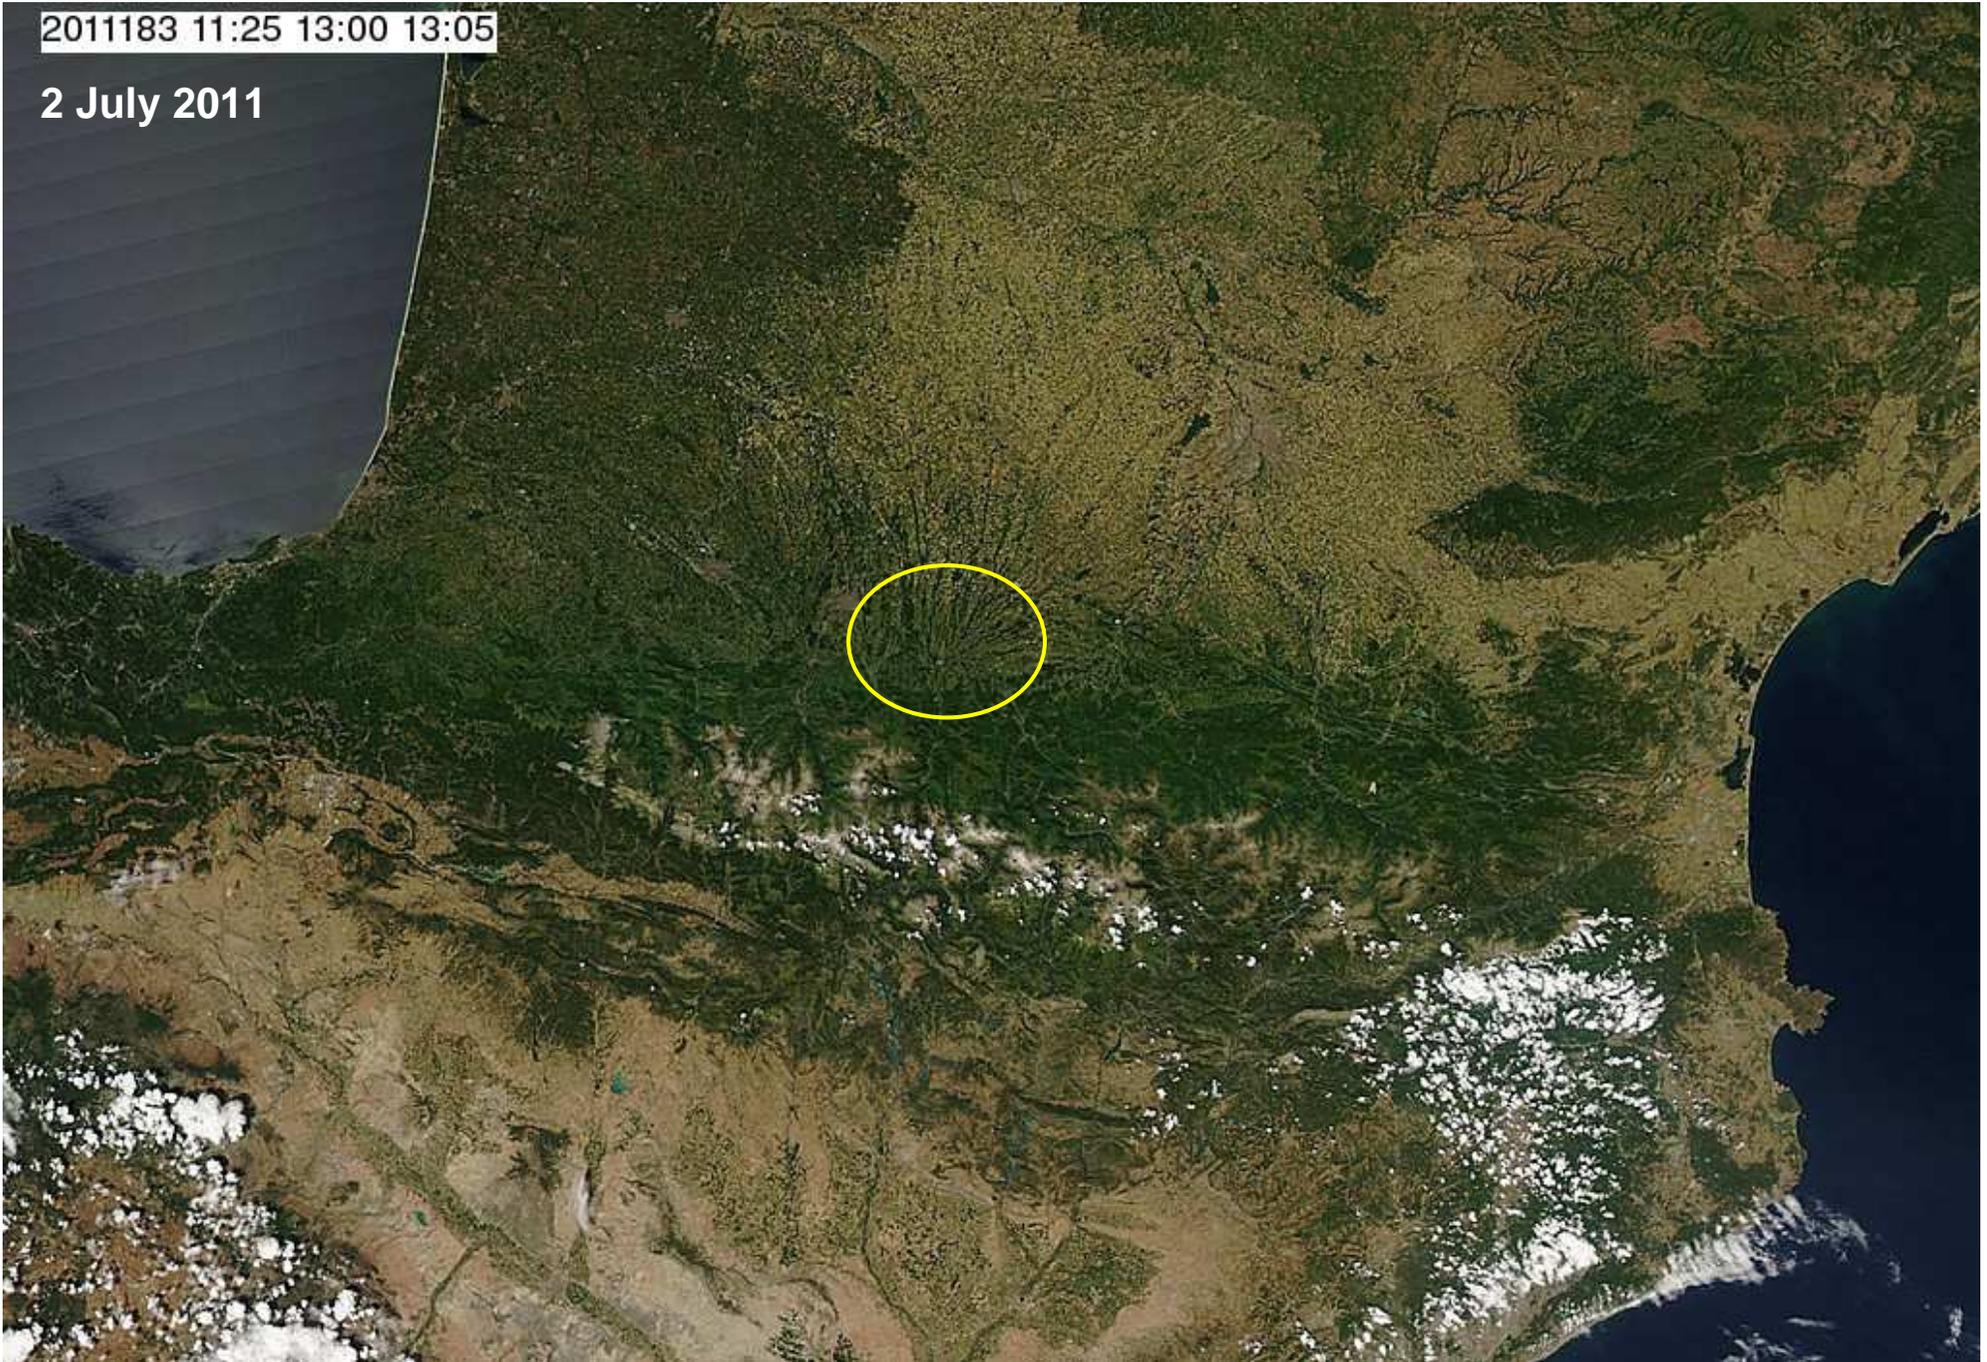

Meteorological conditions

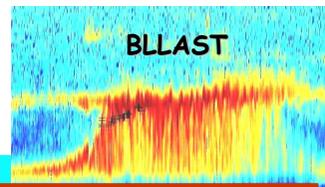

2011183 11:25 13:00 13:05

2 July 2011

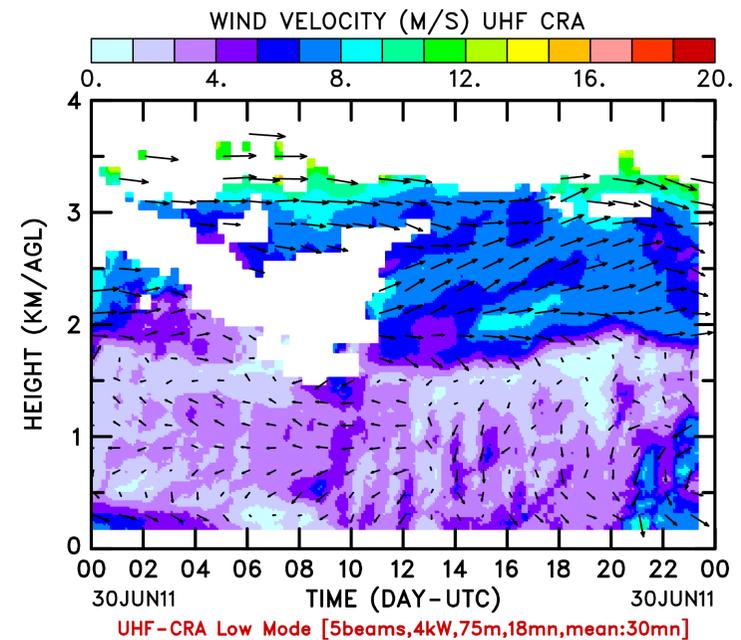

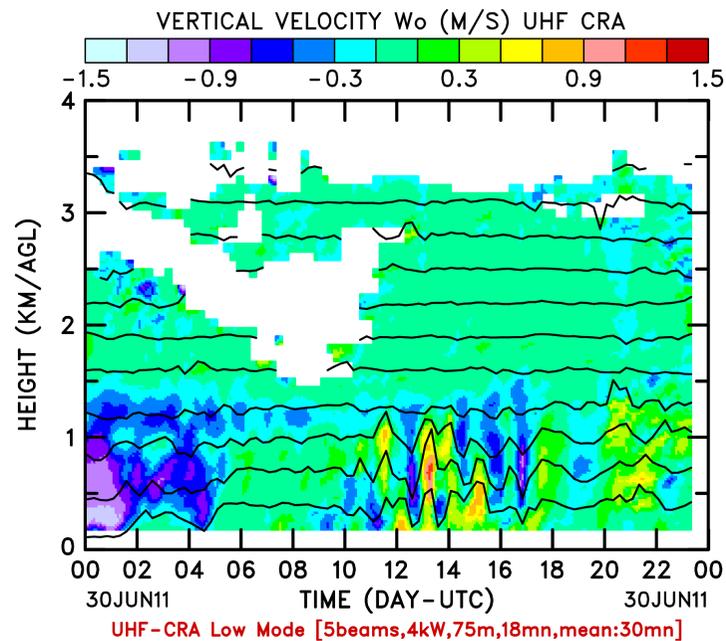

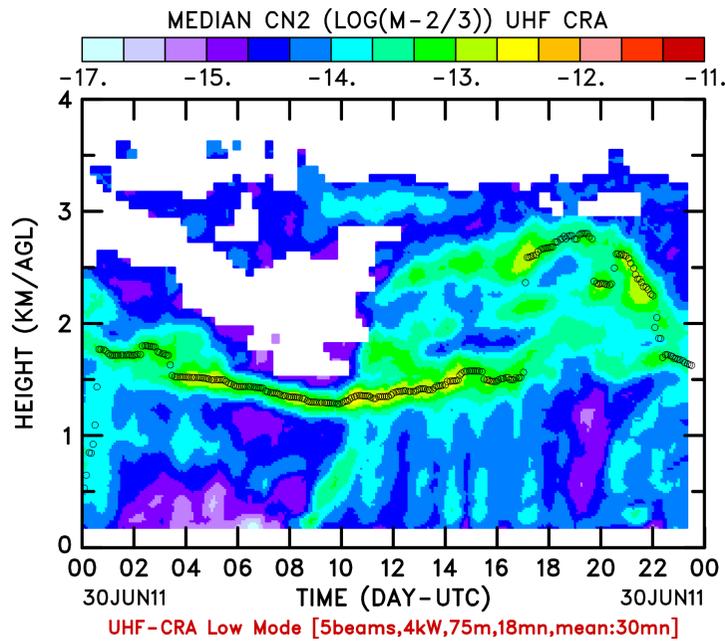

Preliminary results

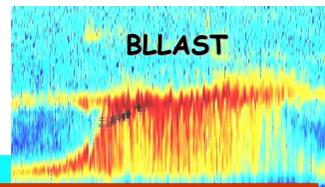

Examples of observations – Vertical structure

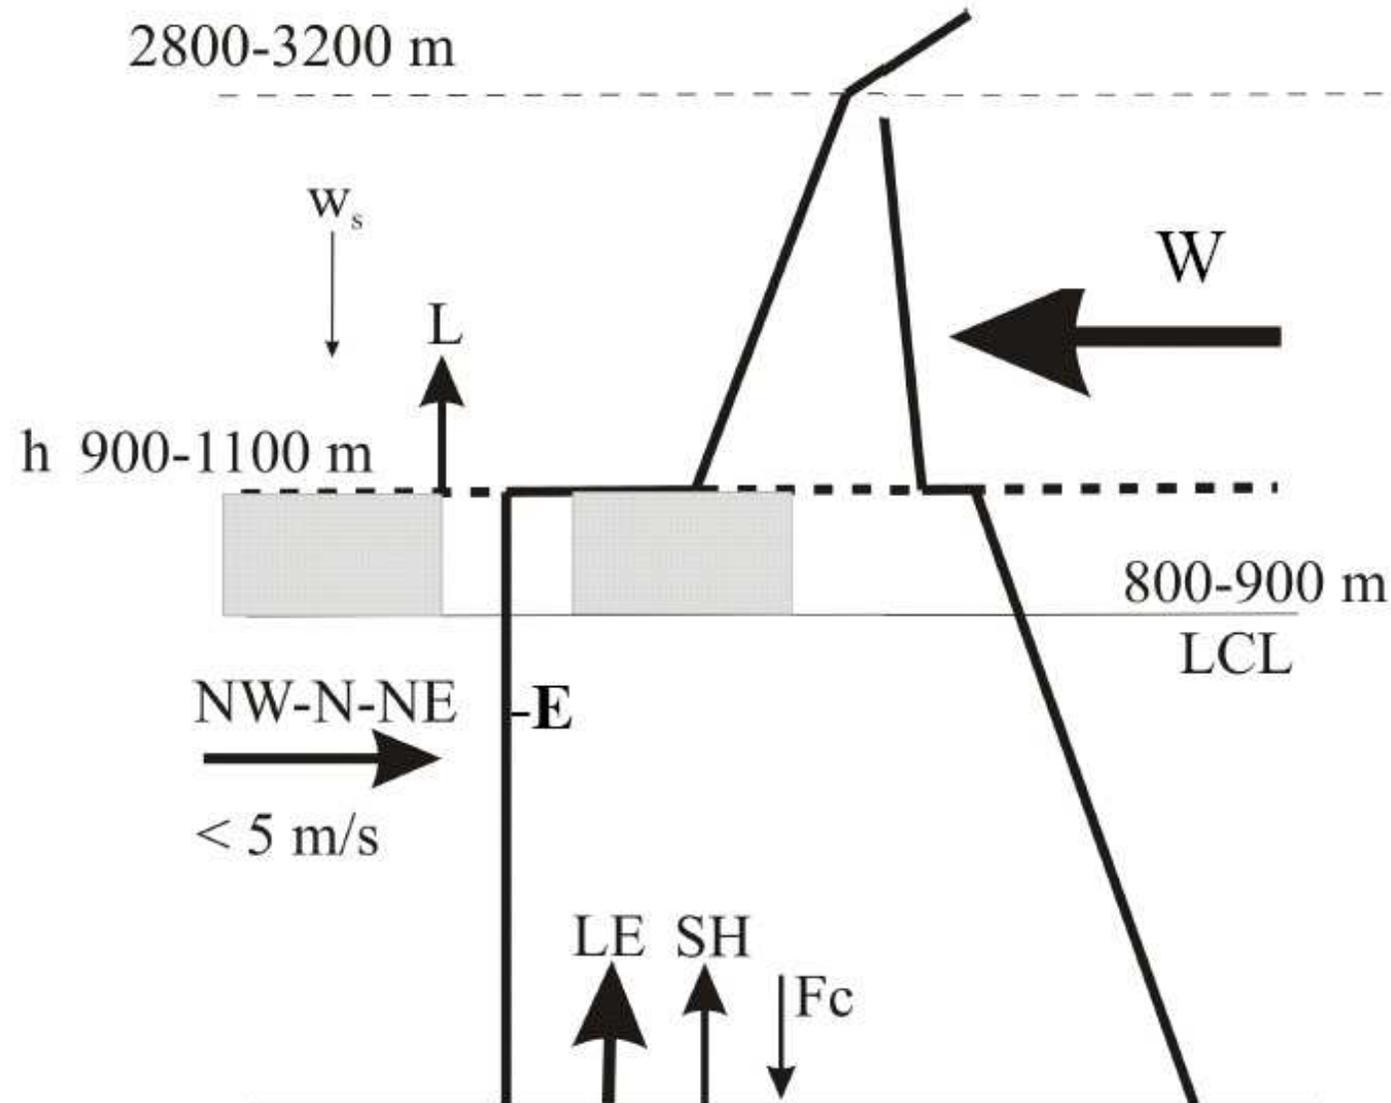

UHF wind profiler measurements 30 June 2011

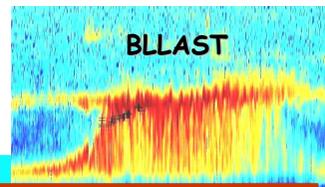

Examples of observations – Vertical structure

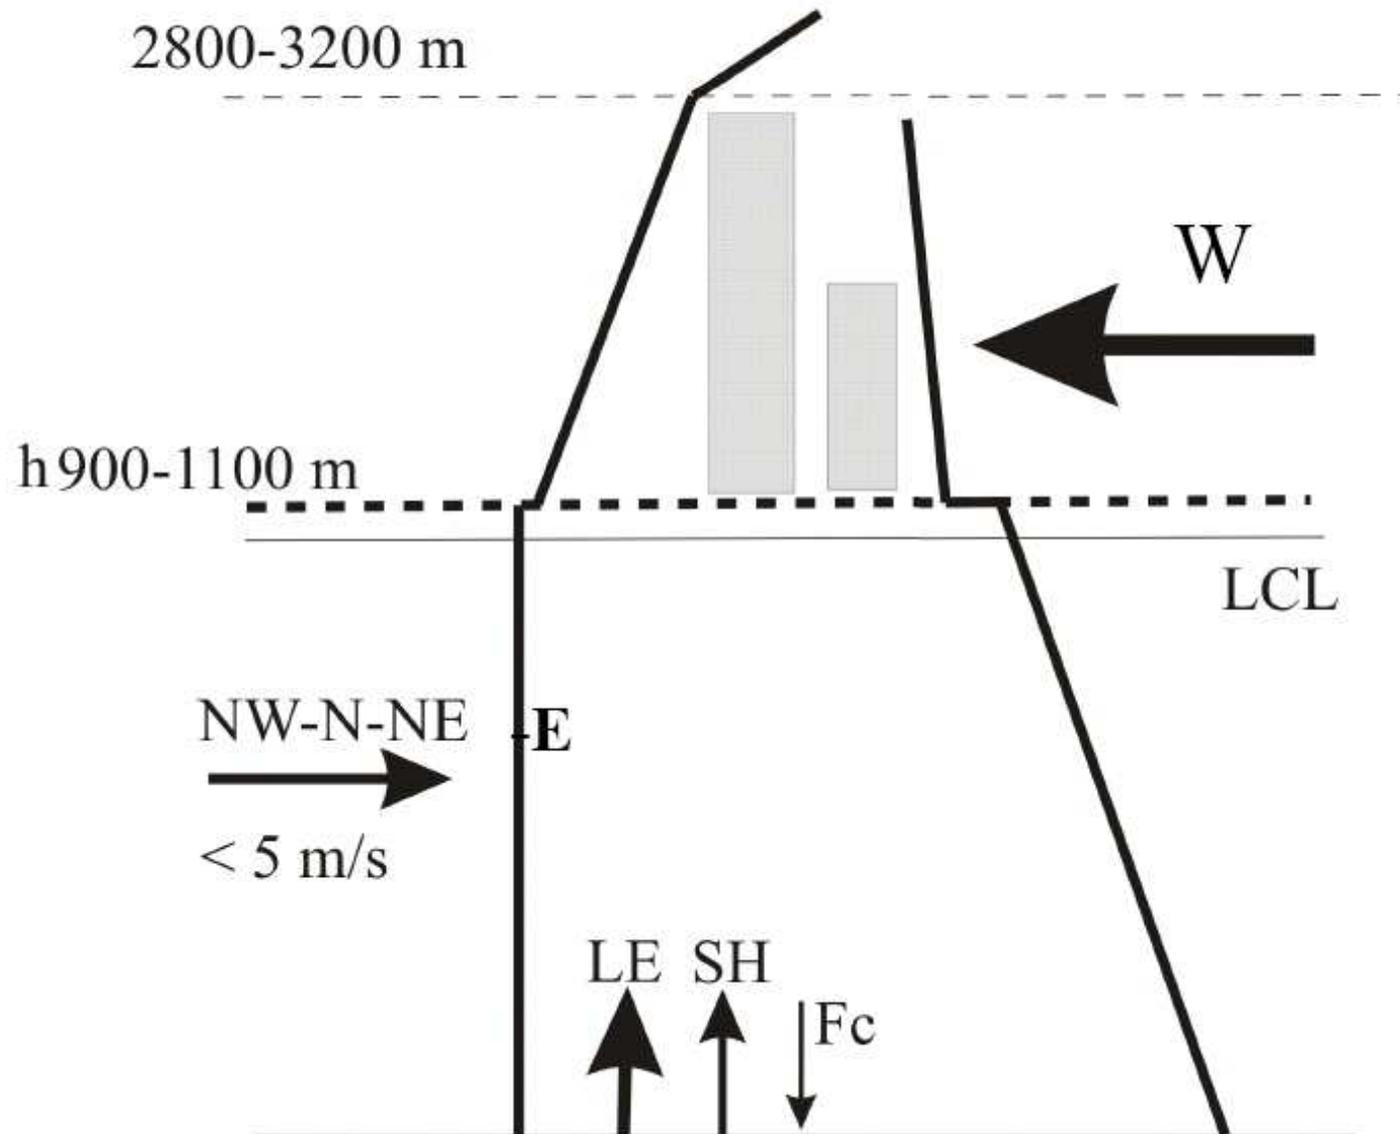

Early afternoon (< 16 UTC)

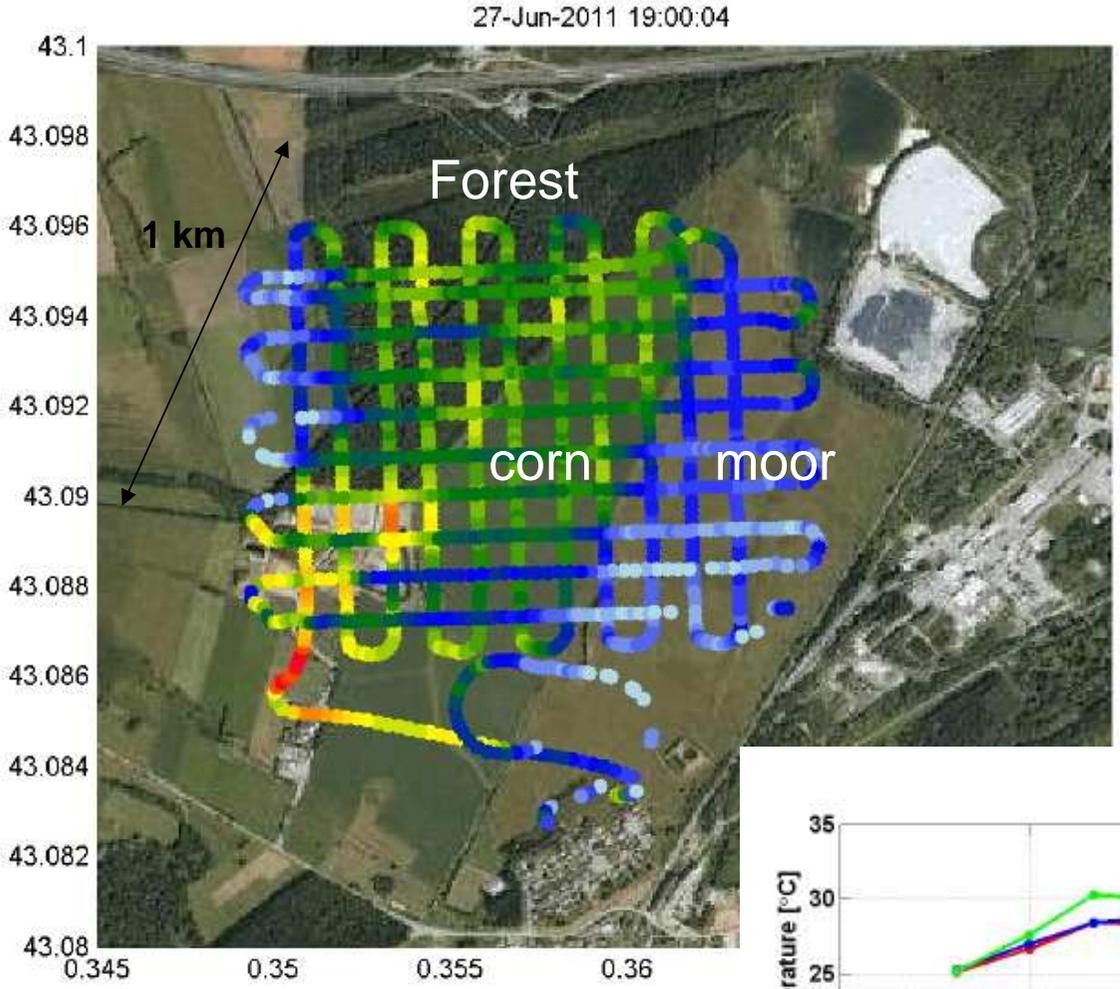

Examples of observations – Vertical structure

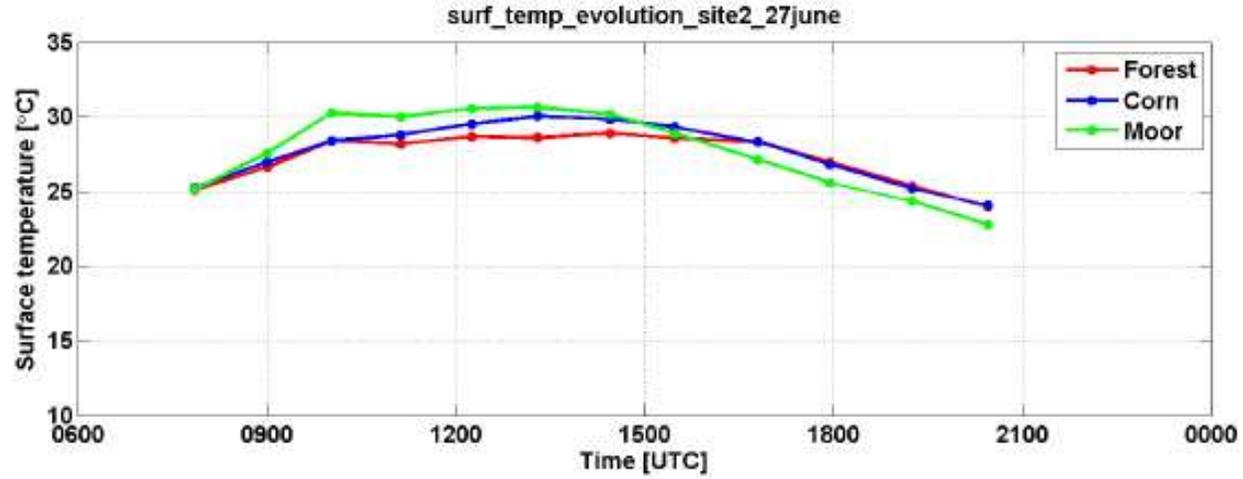

Late afternoon (> 16 UTC)

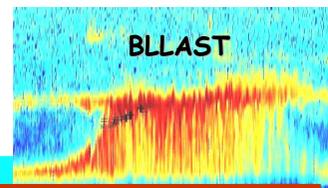

Examples of observations – Surface heterogeneity

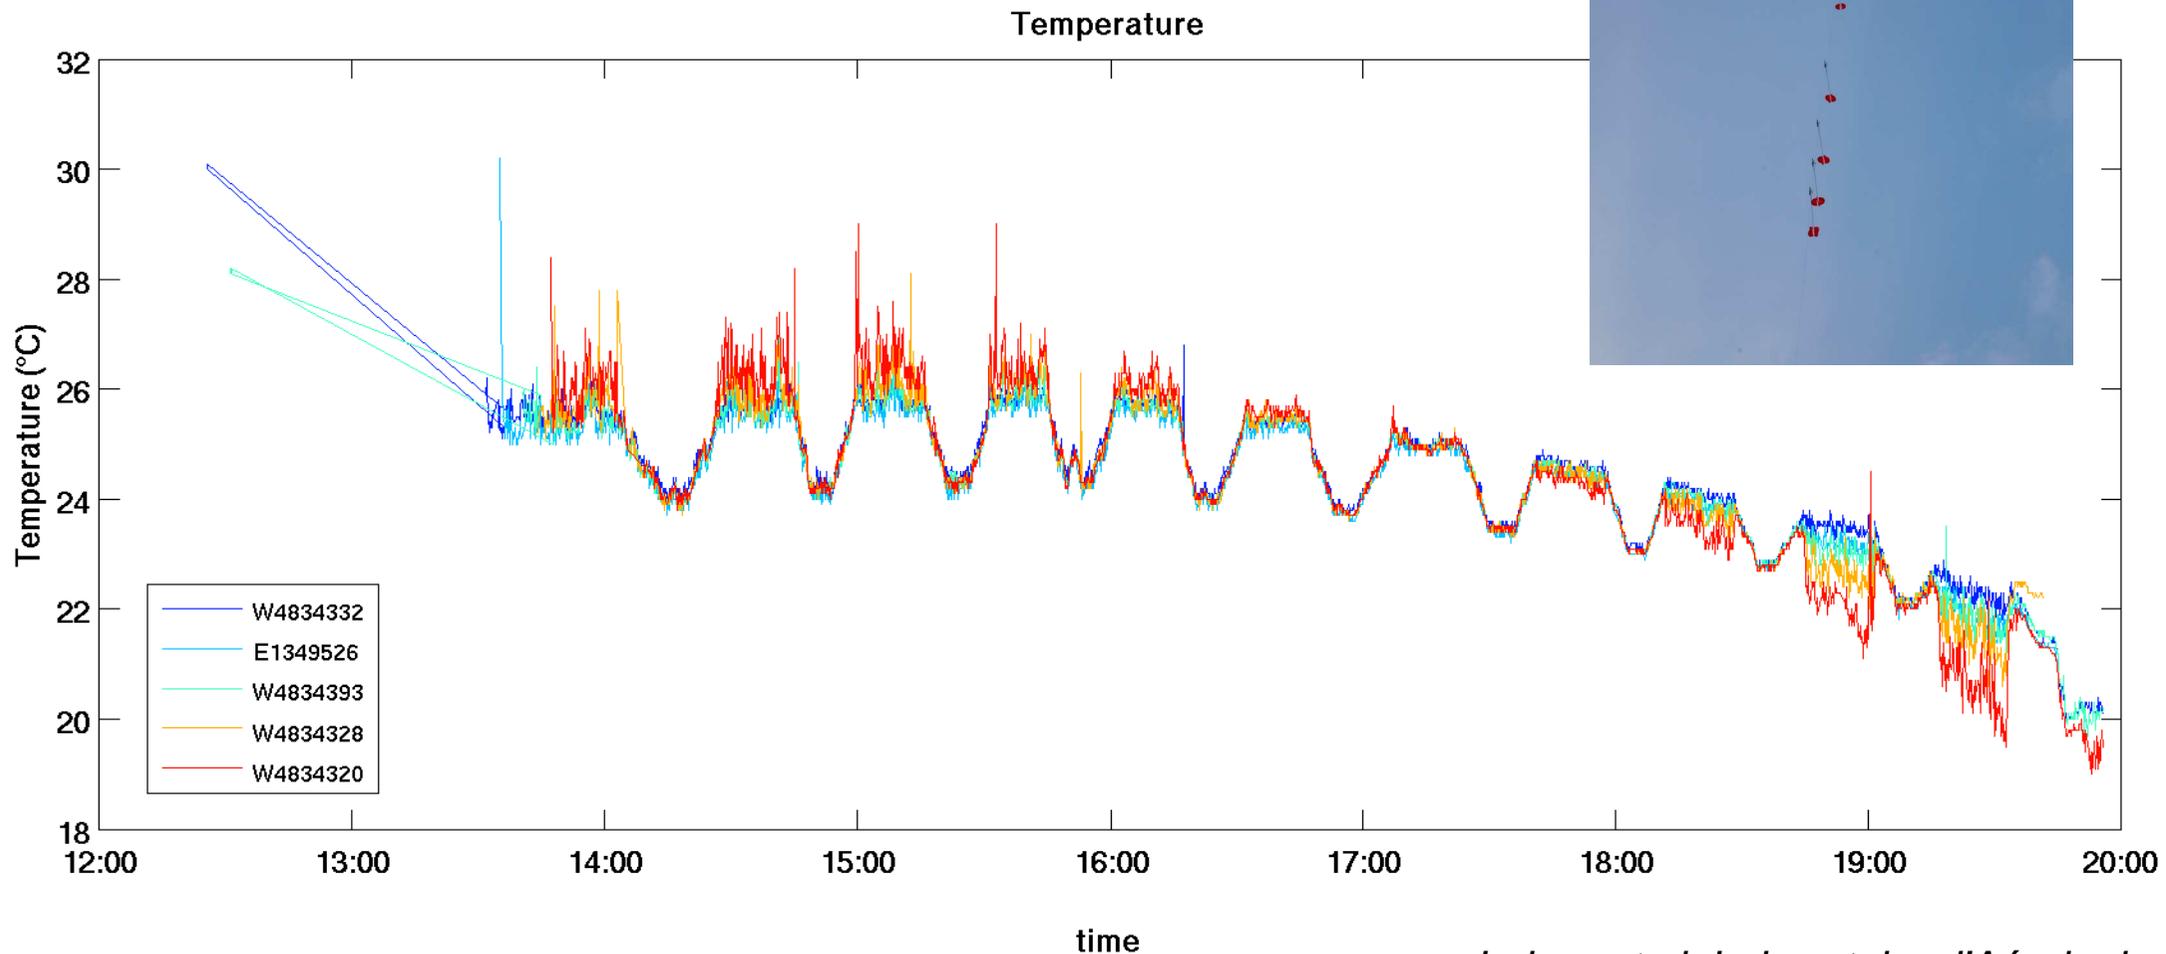

SUMO UAS

Examples of observations:

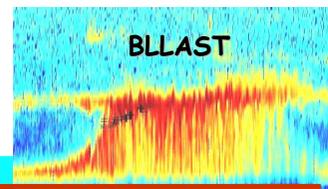

The transition as seen by the tethered balloon measurements

Testing new instrumental devices

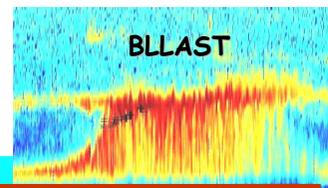

High Frequency Radiosounding system

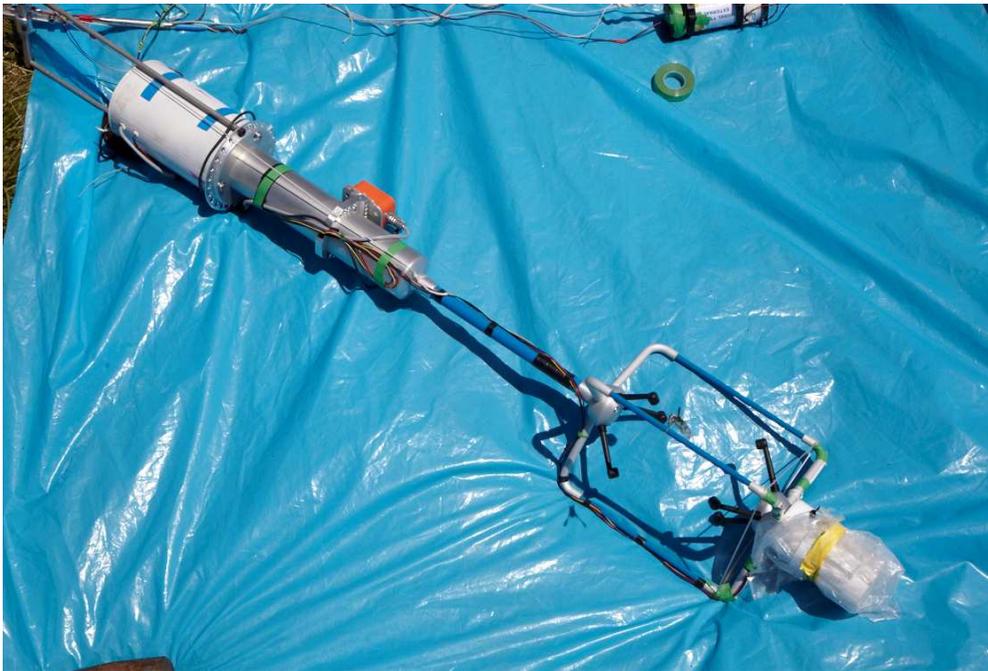

- Frequent soundings of the low troposphere
- Allows the re-use of the probe
 - Retrieval rate of 80%,
 - 65 soundings made with 20 probes

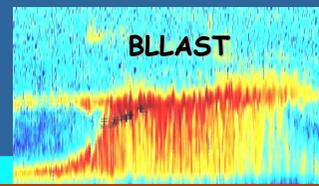

Tethered-ballon Turbulence probe

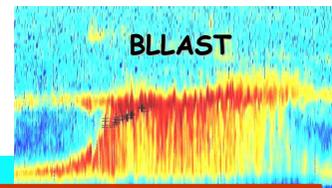

- Miniaturized INS for motion correction
- Airborne sonic
- Usual TTS for reference
 - ~ 60 hours of observations

Multiple UAS experiment

- Validation of sensors, platforms, strategies
- Process study with combined manned and unmanned aircrafts

Coming: Post-field workshop 6-7 February 2012
