

The Cerdanya Cold Pool Experiment 2015 (CCP15)

A study on the valley wind system and cold air pooling
within the largest Pyrenean valley

Daniel Martínez-Villagrasa (1*), Gemma Simó (1), Laura Conangla (2), Davide Tabarelli (3), Josep Ramon Miró (4), Álvaro López (1), Burkhard Wrenger (5), Maria Antònia Jiménez (1), Rodrigo Picos (1), Dino Zardi (3), and Joan Cuxart (1)

- ✓ Motivation.
- ✓ Objectives of the CCP15 field campaign.
- ✓ Instrumentation.
- ✓ Overview.
- ✓ (Very) Preliminary analysis for two given IOPs.
- ✓ Summary and Further work.

J. Ortega

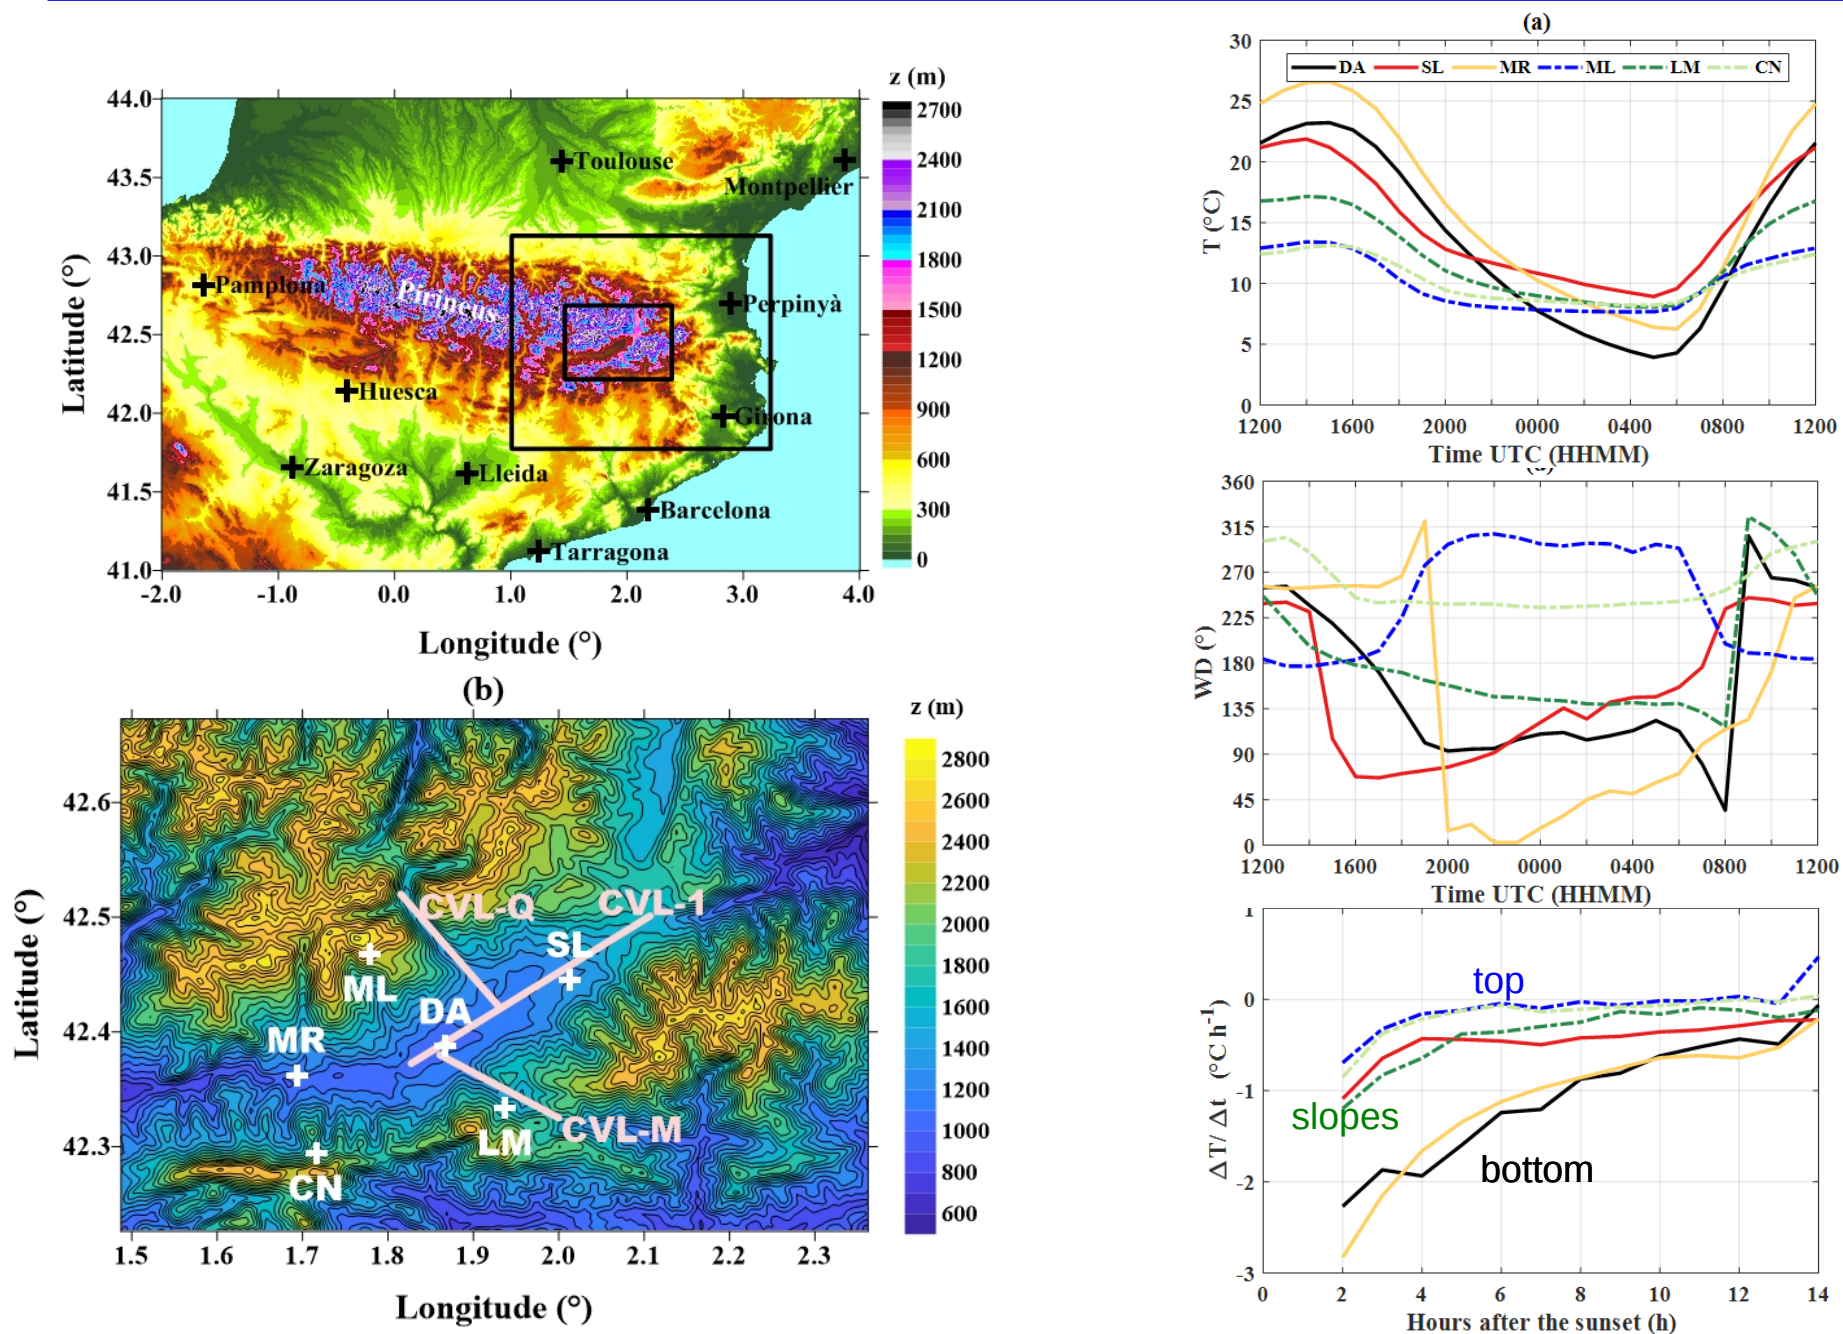

Period: 01/09/2010 — 31/08/2014
CAP definition: $T_{DA} - T_{SL} \leq -3 \text{ K}$.

Table II. Percentage of days with cold-air pool, mean strength (S) and mean duration (D) per month, in the period from 1/9/2010 to 31/8/2014, for the temperature difference criteria between Das and Santa Llocaia ($T_{DA} - T_{SL} \leq -3.0 \text{ °C}$). Standard deviation values are in parentheses.

	$T_{DA} - T_{SL} \leq -3.0 \text{ °C}$		
	% days	S (°C)	D (h)
Jan.	70.2	-7.4 (2.4)	12.6 (5.1)
Feb.	50.0	-6.7 (2.1)	9.7 (4.3)
Mar.	52.4	-6.1 (1.6)	8.2 (3.1)
Apr.	45.0	-5.8 (1.2)	6.5 (2.7)
May	54.0	-5.4 (1.2)	5.2 (1.9)
Jun.	45.0	-5.5 (1.2)	6.6 (2.1)
Jul.	50.8	-5.3 (1.3)	5.8 (2.3)
Aug.	61.3	-5.7 (1.3)	7.1 (2.8)
Sep	70.8	-6.0 (1.4)	7.8 (2.9)
Oct	65.3	-6.3 (2.0)	9.5 (3.8)
Nov.	55.0	-6.2 (1.9)	10.3 (4.3)
Dec.	80.6	-7.1 (2.1)	13.9 (5.4)

- 59% of the nights with daily CAPs.
- 70% with $T_{DA} - T_{SL} \leq -5 \text{ K}$ and 5% $\leq -10 \text{ K}$
- Daily CAPs persist more than 5 h.

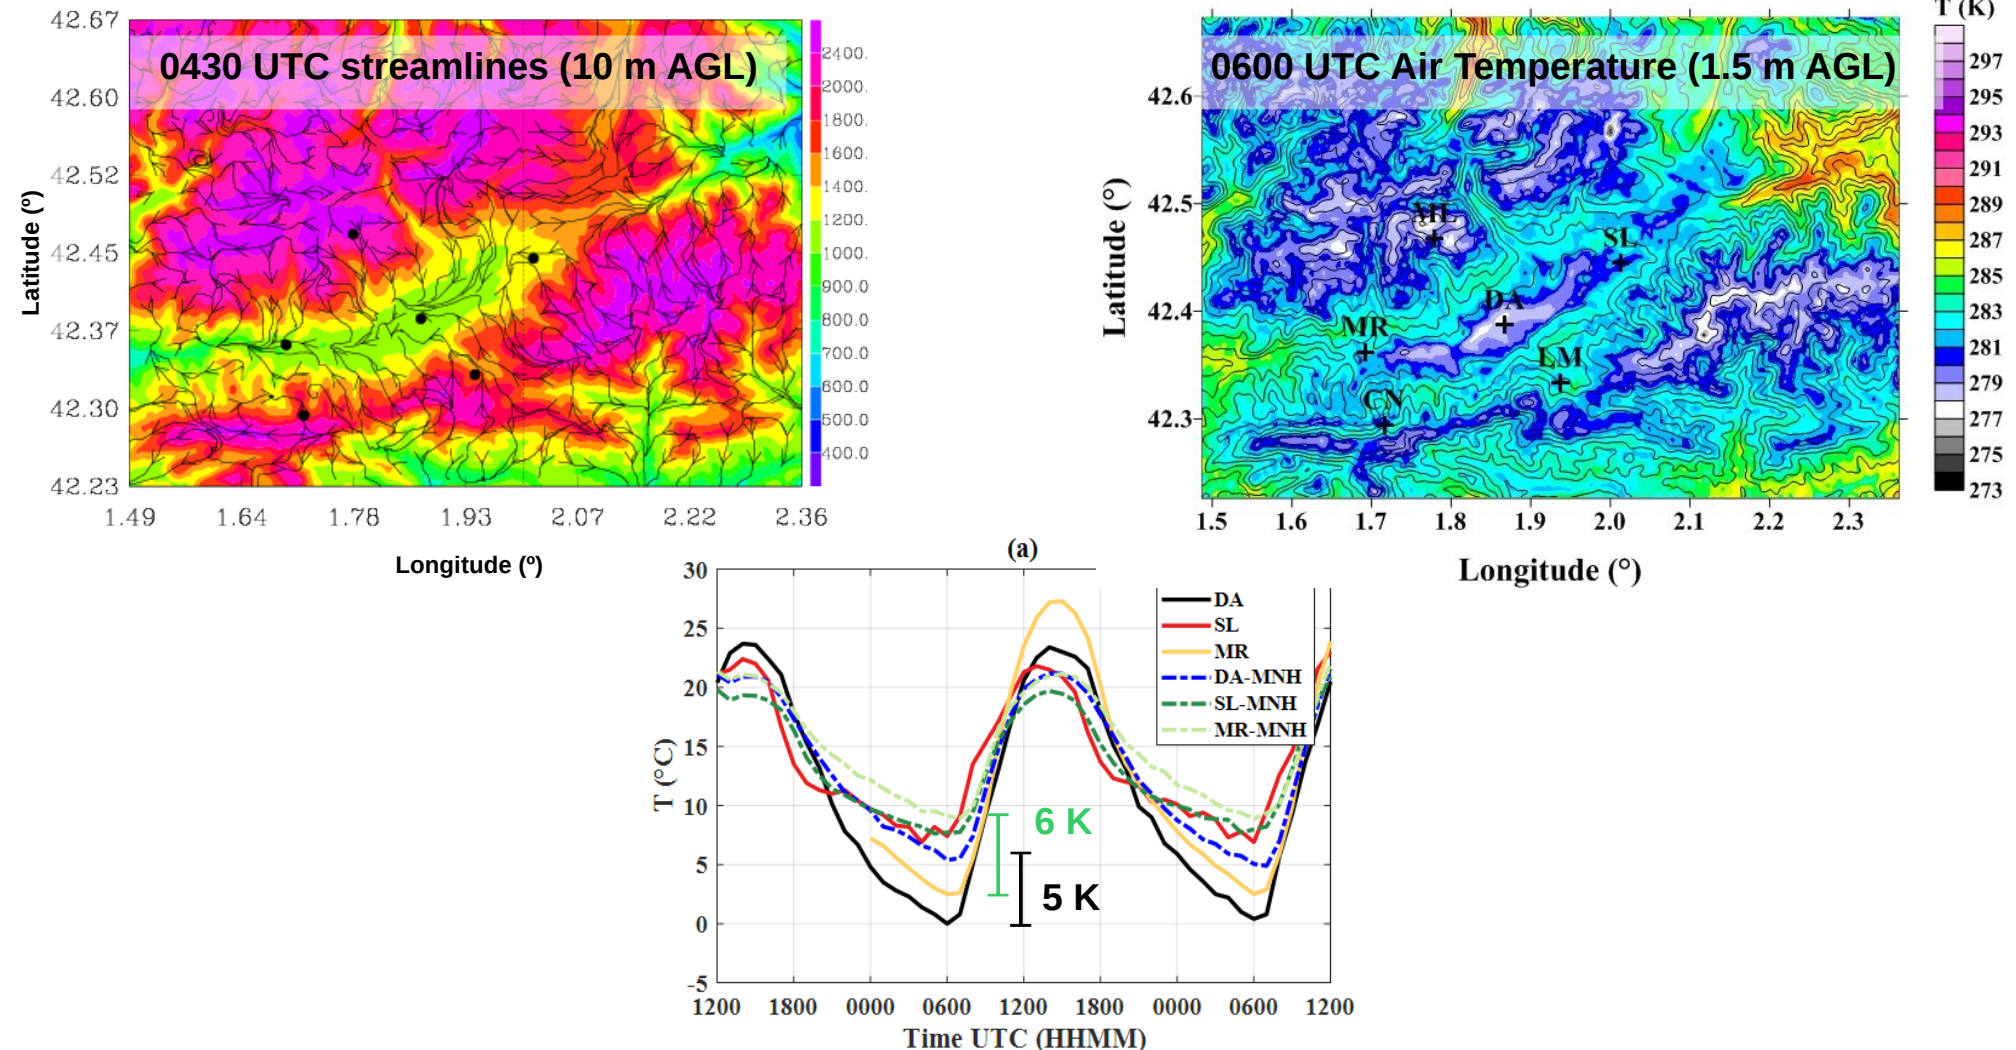

Conangla et al. (2018): Cold-air pool evolution in a wide Pyrenean valley. *Int. J. Clim.*

Conangla et al. (2018): Cold-air pool evolution in a wide Pyrenean valley. *Int. J. Clim.*

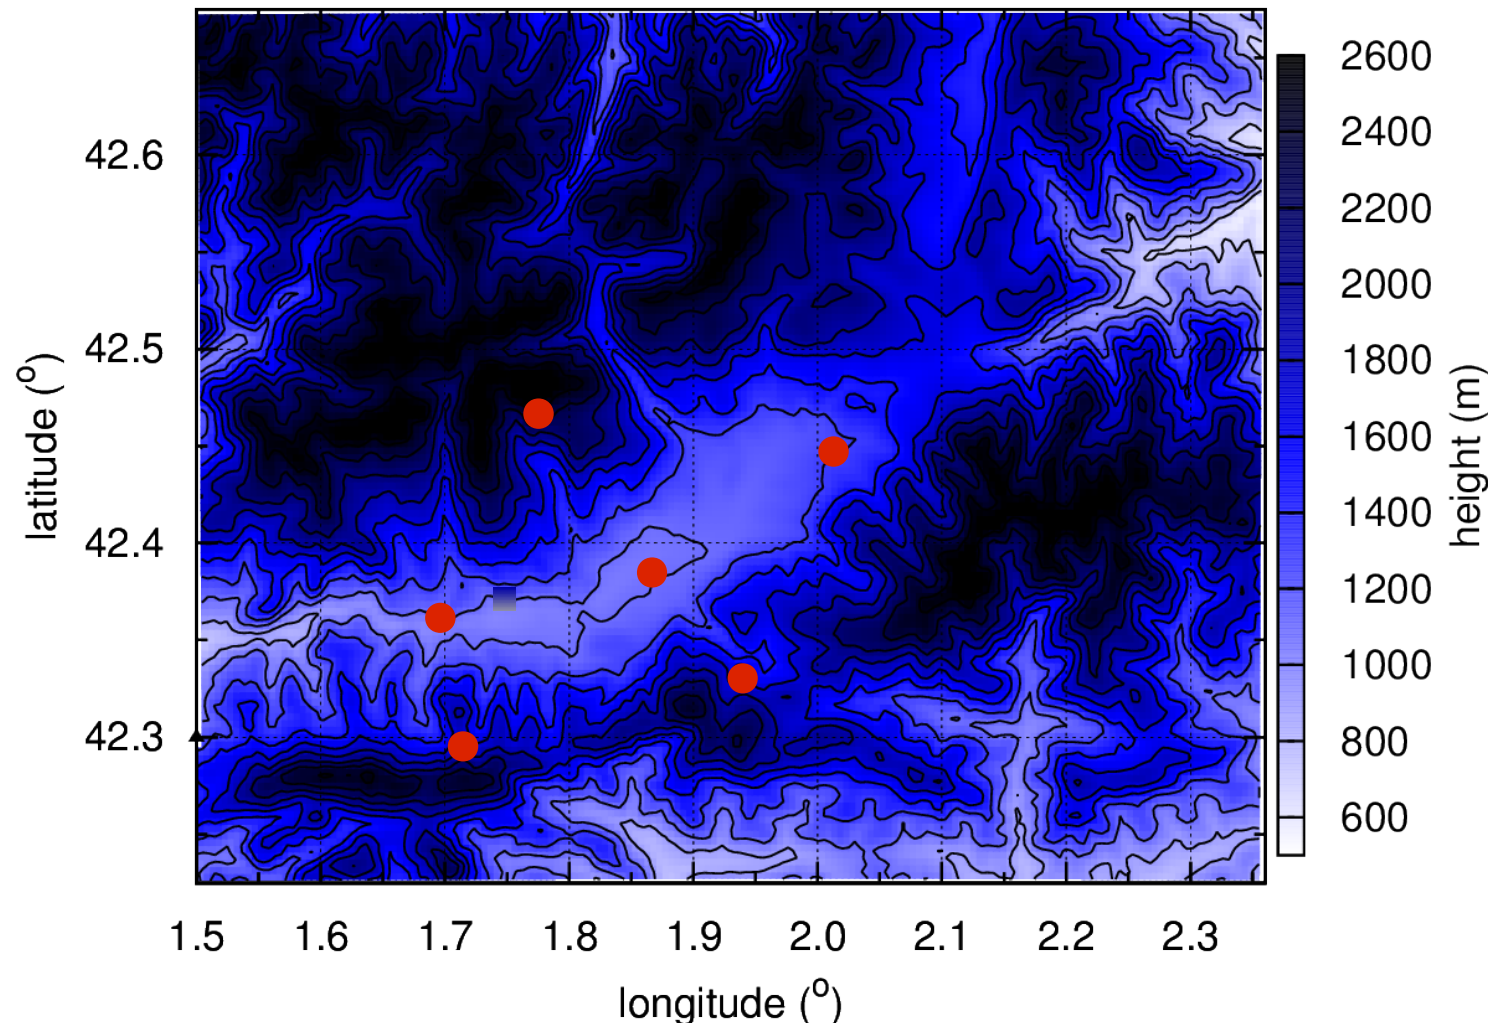

A 48-h long case study (**12 UTC 30/09/2011 – 12 UTC 02/10/2011**):
Meso-NH model (Lafore et al., 1998) with **two nested domains**.

- ✓ Horizontal resolution: 2 km and 400 m.
- ✓ Stretched vertical resolution: **3 m close to the ground** and 8 m at 500 m height.
- ✓ Initial and lateral boundary conditions: ECMWF analysis every 6 h. One way nesting for domain 2.

Conangla et al. (2018): Cold-air pool evolution in a wide Pyrenean valley. *Int. J. Clim.*

- ✓ Study the structure and evolution of the cold-air pool (CAP) at the bottom part of the Cerdanya valley under fair weather conditions. Together with...
- ✓ Valley wind circulations (slope and valley flows).
- ✓ Evolution of the surface energy budget (SEB) at the centre of the valley.
- ✓ Fine structure of the thermal inversion within the first meters above ground.

- ✓ Study the structure and evolution of the cold-air pool (CAP) at the bottom part of the Cerdanya valley under fair weather conditions. Together with...
- ✓ Valley wind circulations (slope and valley flows).
- ✓ Evolution of the surface energy budget (SEB) at the centre of the valley.
- ✓ Fine structure of the thermal inversion within the first meters above ground.

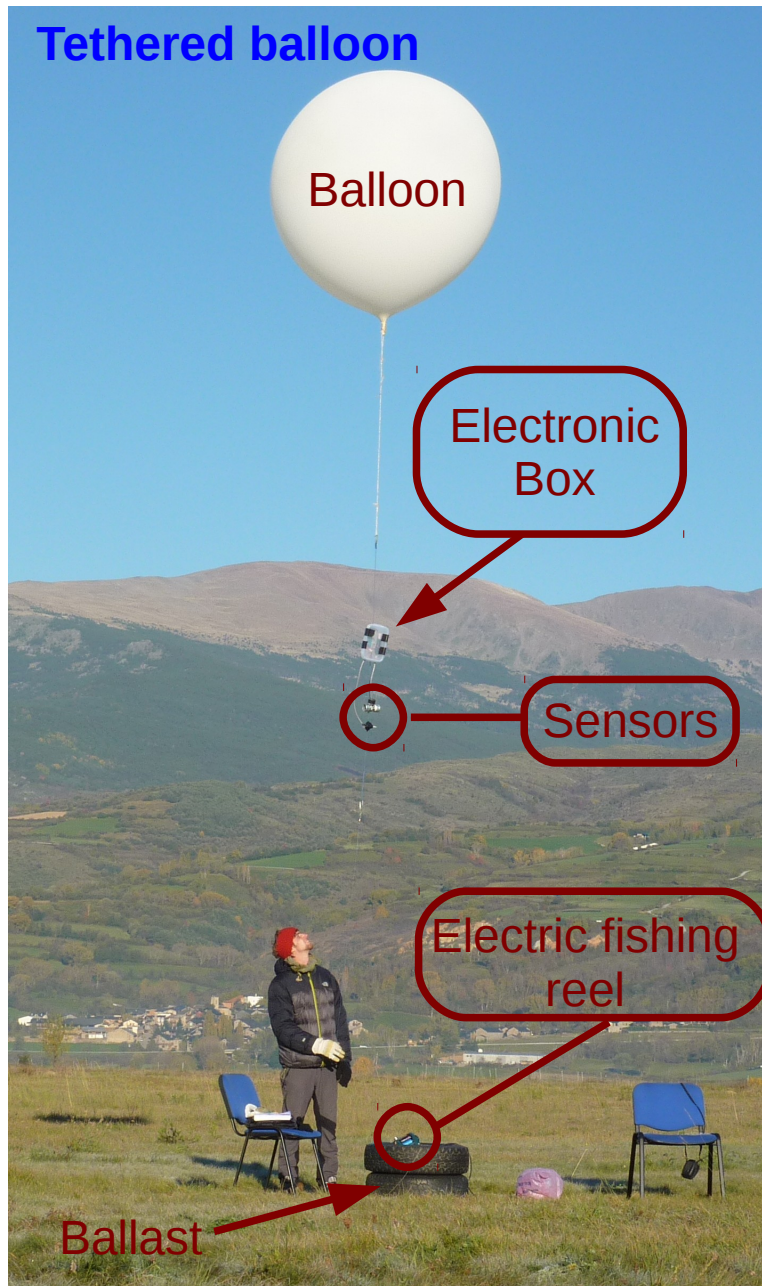

WindRASS and **SEB** operated by the **Catalan Met Service** were installed near their operational station at the Das Aerodrome.

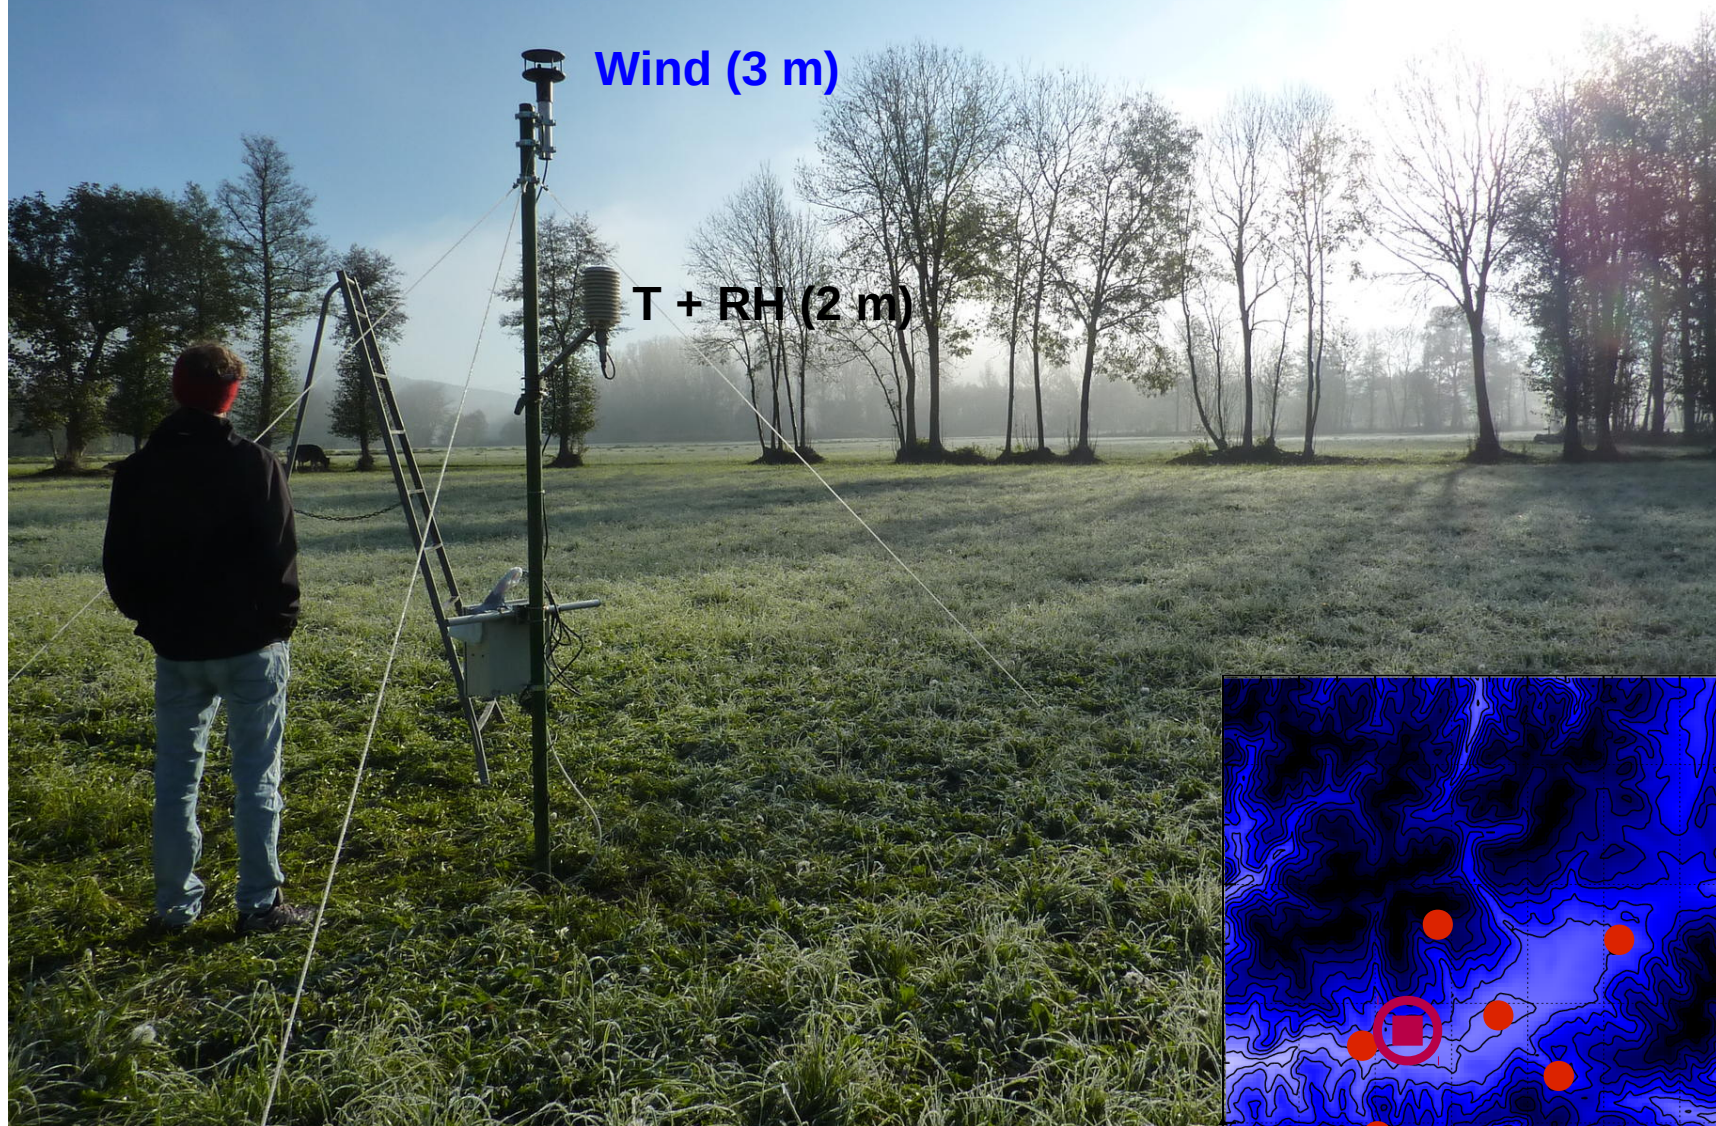

Period: Oct 2015 – April 2018 (~2+ yr data).

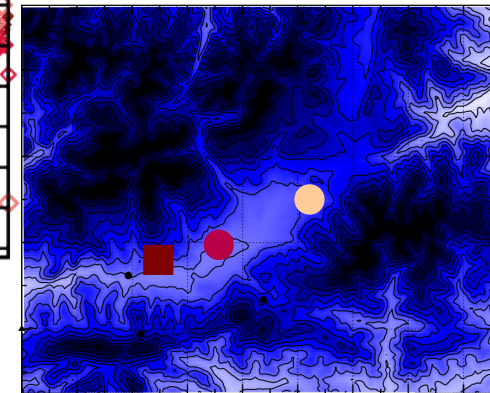

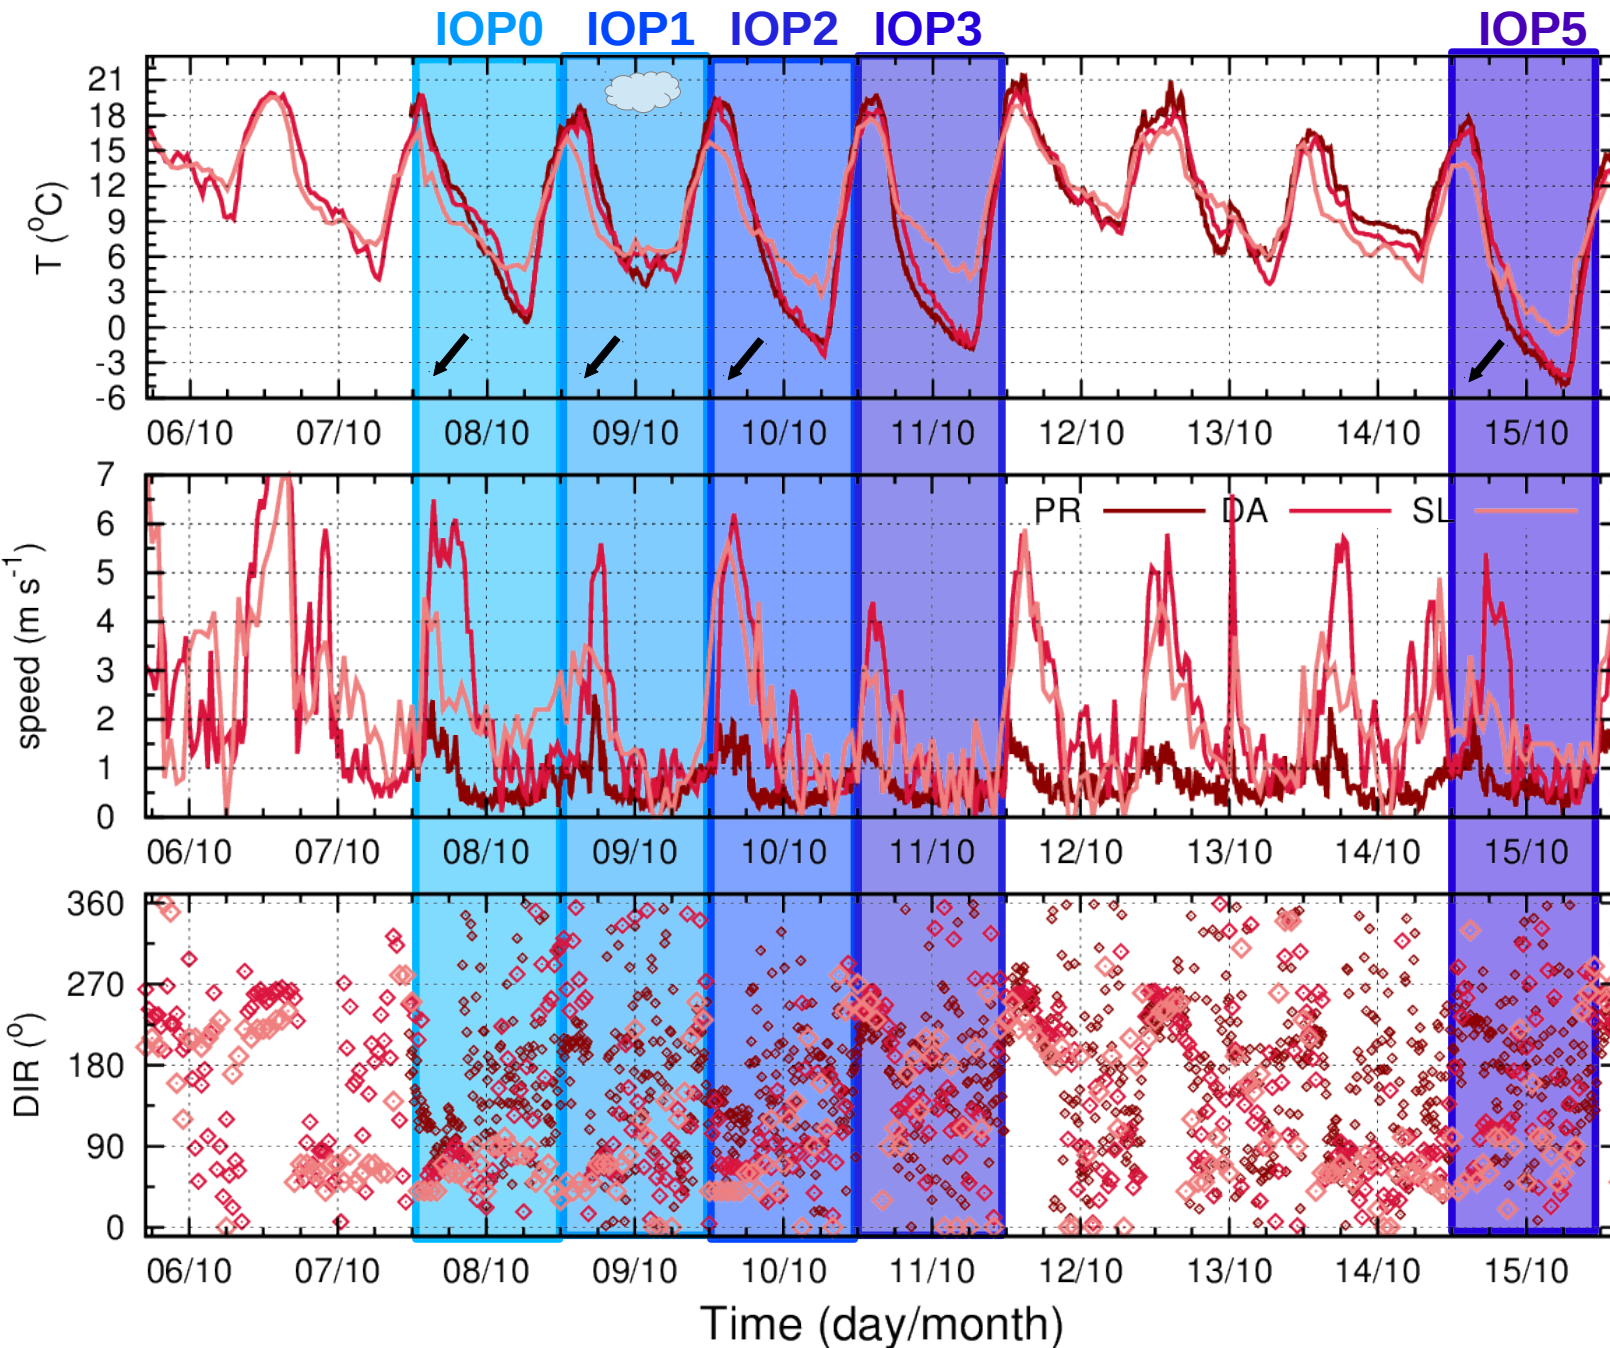

Belen Martí (yesterday)

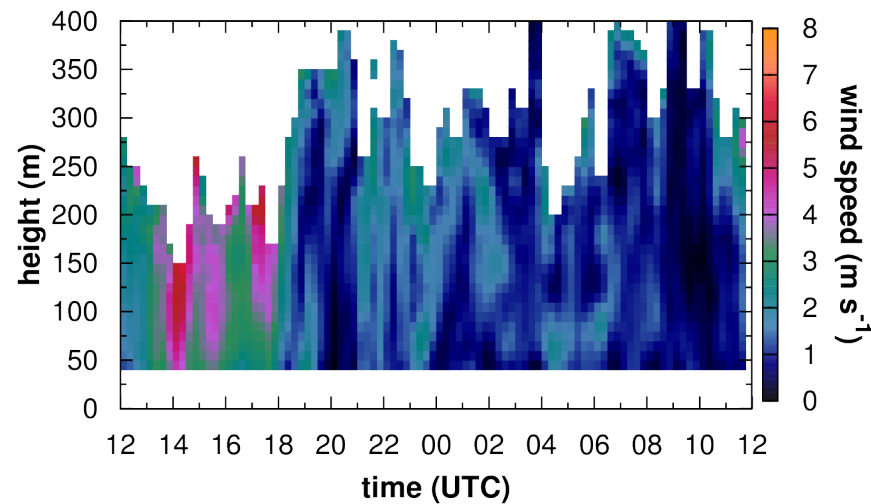

Additional weather station

Period: 6 – 15 Oct 2015 (10 days).

Das 2-m column (CCP15 iop3)

- ✓ **Aim:** study the structure and evolution of the CAP at the bottom part of the Cerdanya valley under fair weather conditions.
- ✓ A boundary-layer **temperature and wind profiler** and a **Surface Energy Budget** station were installed near the operational AWS at the Das Aerodrome. Both devices have been running for more than 2 years (Oct 2015 – Apr 2018).
- ✓ **CCP15 field campaign (6-15 Oct 2015):**
 - ✓ A 2-m column of **thermistors** to analyse the **surface thermal inversion**.
 - ✓ An additional surface weather station installed at a **secondary sub-basin** of the Cerdanya valley located few kilometres downstream to evaluate the **spatial thermal differences** at the surface.
 - ✓ **5 IOPs** were identified: variety of cases that allow to study the cold-air pool formation and development of local winds **under quiescent conditions**, under the presence of a significant **background wind channelized** along the main valley axis **or with increasing cloud cover**.
 - ✓ Differences in development of **T inversion**.
 - ✓ **SEB** terms (+ Imbalance).

- ✓ **High-resolution mesoscale simulations** performed for each IOP.
 - ✓ Validation against observations.
 - ✓ Assessment in the **physical mechanisms** responsible for **intensive cooling** within the valley and...
 - ✓ ... in the description of the **valley wind system** and influence of the larger scale wind patterns.
- ✓ Put the findings from **CCP15** in context with the **4-year statistical study** and...
- ✓ ... with the **CCP17** field campaign (**winter**).

Acknowledgements:

- ✓ Data provided by three meteorological services (**Meteocat**, **AEMET**, **Meteofrance**).
- ✓ Thanks to the **staff** from the **Das Aerodrome** (they were really helpful).
- ✓ Grants of the Spanish Government **CGL2015-65627-C3-1-R** (that includes Regional Funds **FEDER**) and **PCIN-2014-016-C07-01** (within the framework of **ERA NET PLUS NEWA**).
